

TRANSLATION!!!!!!!!!!

To start go to the website named " <http://www.geoportail.gouv.fr/accueil> " the coordinates of the point you have to search are

635419.125 E
6856428.365 N

You are supposed to find a famous French castle (Clue: The name of the king who has build this castle is Louis XIV)

Now we are going to discover with you French castles in our country

From the castle and their coordonates you have found take a (gisement) of 141.645816 gon and draw a straight line. Now do an intersection among this straight line and another you will find with two points with the following coordinates

First point: 669043.980 E
6831901.589 N

Second point 667088.244 E
6830596.796 N

Next you have found it take the first point and trace a circle with this point for center and a radius of 10219.45326 m.

Do the same with the second point and a radius of 11913.63027 m.

Then do an intersection between that two circles and take the point who have aproximatly the following coordinates

679072.439 E
6829025.201 N

The point you have supposed to find is a superb castle and your task is to give to them the name of it!!

Enjoy men have a good time!!!!

PS : If you need another clue we can tell you that castle was the spectator of a huge dispute between Louis XIV and Mr Fouquet But that is so because we think that clue is already too much :D
