COURSE EN COURS
2014/2015 !

Flying to the victory

Course en cours

Course en

Cours is an international competition that brings small electrical cars together pits.

It's an original education process centered on Sciences and Technology. All along the school year, each team, composed of students, makes a stable. They have to **imagine, design** and **make** the small racing car to eventually make it **run**.

As real engineers, the students use the same tools and processes as the professional in the race automobile, like the software Catia V5.

A large part is given to marketing and communication are important in this project.

TO DEVELOP AND FINANCE THEIR PROJECTS, ALL THE STABLES HAVE TO FIND OFFICIAL PARTNERS.

What is interesting in being a partner?

- An advertisement
- To convey a positive image of your company
- A social action

Our team

Corentin PERIDON
testing engineer

Quentin VASNIER
graphics designer

Matthis CAPILLON
merchandise coordinator

Baptiste BIZET
design engineer

Paul OHL
manufacturing engineer

Déborah TURBELIN
manufacturing engineer

Améline GANCEL
team leader

Aquilam means « Eagle » in Latin. It's the topic of our project Course en Cours. We would like to show all the skills of this animal through our car : balance, speed, precision and fluidity. Lot of eagle species are endangered like the royal eagle. So, our goal is to make this vulture better known and, using biodegradable materials, we follow the sustainable development way.
