

# May/June 2018 Ecoweek in form 3: a short report

## ENERGY

### Informative lesson

On Thursday 24 May the children of group 3 became acquainted with different types of energy. A guest lesson was given about sustainable energy from Eneco. It was quite a tough theme for group 3. Yet the children listened for over an hour and did assignments related to energy. Children know quite a lot already!

## Creative lesson

The children had different creative lessons with the theme sustainable energy. We mainly worked with wind energy and battery energy. The children have made air missiles. What can you do with air pressure? What do you need it for.

In addition, they have made a sailboat to see what you can use wind energy for. And lastly, they have learned to make a circuit by applying it to a nerve game. Where do you see a circuit of electricity? What can you do to use this circuit more sustainably?

## We visited a wind mill in Cuyk

Finally it was then ... Groups 1 to 3 were allowed to visit the mill in Cuijk on Wednesday 13 June In advance, the children have come up with questions for the miller. The children enjoyed it very much!
