

# THE GLOBAL WARMING

By I.C. 2 Quartu/Italy

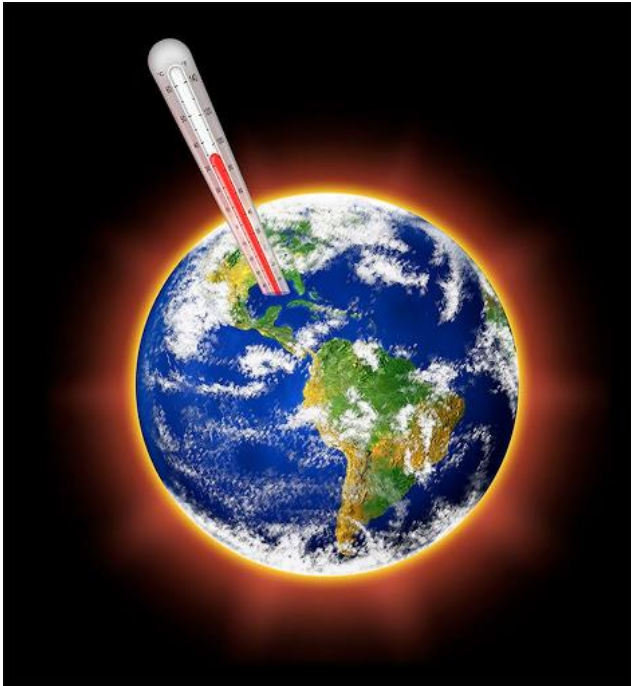

Our planet is in danger, because of that we can't take care of it. We have not yet understood that we are guests of the world and not the masters. Even if a little late we can try to give a new life at the world that we are slowly destroying. If each of us does his part, the situation will gradually improve.

The Pollution has become a big problem for the world, in fact the vapors expelled from the factories create a hole in the ozone which allow it to enter the harmful rays of the sun. For this reason, temperatures are increasing nowadays. This global warming is causing serious damage to the ecosystem, in fact, due to the high temperatures, the glaciers are melting and the level of the oceans is gradually growing.

Together we can change things...

**STOP THE CHANGE  
SAVE THE PLANET!**
