

1st: school use to improve the teamwork between students or/and teachers

Our school has been working on the development of group work between pupils as well as pupils and teachers for years, because well-organized group work is focused on cooperation, not competition.

The ability to act as a team is very important. It is in the Curriculum of General Education in Poland . It is one of the most important skills of education.

The skill to work in a team to create a friendly atmosphere, creativity and communication are highly valued.

Working in groups also gives many other benefits to students, for example: helps to become responsible for study, gives the chance to overcome shyness, teaches tolerance and kindness, increases motivation to work, open discussion and prepares for public life.

We really like group work, because we have influence on what we do at school, we decide which activities we will engage in.

We feel important, teachers hear our opinion.

We can get more by working together in a group.

The classes have a nice and friendly atmosphere.

It also affects our self-esteem.

We feel that our ideas and proposals are important and have the chance to be accepted.

This is a great opportunity to make new friends and look at teachers close!

It teaches us responsibility for words, honesty and trust as well as tolerance and objectivity.

For teachers

allows you to plan and use student learning time well, gives you the opportunity to take care of weaker students, allows you to meet and develop many students' educational needs, gives you the opportunity to get to know students better, integrates the class team. We teach critical thinking, taking responsibility, key skills in the modern world.

2nd: innovate measures in your country, city or town to save the planet thanks to citizens as a society teamwork.

Elblag is one of 44 cities taking part in the modern project Feel the climate about the changes in the climate (the flood, storms, strong winds and high temperatures)

The plans of adaptation were made to improve the environment, air and water conditions to rise comfort of living in Elblag.

A very important element is waste segregation. All the citizens have to segregate litters. There are special containers for different waste kinds.

Elblag has its own modern waste factory called ZUO with very modern technology. It sells the glass and paper, makes special synthetic material with plastic wastes and produces green energy for our town.
