

**Autism
Awareness
Day**

Kacper Kamionka

What is it?

Autism - a complex disorder of the development and functioning of the central nervous system characterized by difficulty in reading and communicating feelings and disturbances in the ability to build interpersonal relationships, impoverishment and stereotypical behavior, and difficulties with the integration of sensory impressions.

Category of it

- Childhood autism
- Atypical Autism
- Asperger's Syndrome

April 2 - World Autism Awareness Day

Annually, on April 2, the World Autism Awareness Day is celebrated. The day was established by representatives of the member states of the United Nations on January 21, 2008. Its main message is to raise public awareness of the problems of people struggling with this disease.

The symbol of solidarity with "autists" is blue. In Poland in previous years, among others, important and historic places, and in large retail chains there are so-called "Quiet hours".
