

## PRESENTATION ON THE ENVIRONMENT – PORTUGAL

Good morning everyone! I'm Sofia and together with the other Portuguese Erasmus students we have prepared a short presentation about this important topic that so many people discuss nowadays: *What* should we do about all the environmental problems that we are facing? -

**(SLIDE 1)**

**(SLIDE 2)** – As we all know, many of the environmental problems we have nowadays are consequences of human actions throughout the history of our planet and that is why we are responsible for finding **solutions** to these problems. If you don't believe that it's our fault, then we have this video that shows some negative effects. **(Show the video – 3:35' - <https://youtu.be/JaSe85Mcp0>)**

**(SLIDE 3)** – We have to take measures! Our future depends on our wish to change.

Our school could not keep quiet about this! So, some ideas have arisen!

**(SLIDE 4)** – That's how a project called "Nests" appeared! But building nests was just the beginning...

**(SLIDE 5)** – The project was vast. It intended to repopulate the green areas of our school, it also planned the rehabilitation of "The stairs of nature" – that were a bit dirty and neglected (as you can see here in the picture), make a survey about the green areas of the school, make a sound map, etc.

To conclude, we feel that we need to say that all these problems that we are dealing with today make us anxious because we don't know what can happen tomorrow if we all don't make, at least, a little change in our behaviour.

**(SLIDE 6)** – We hope that you all have enjoyed our presentation. Have a nice week!
