

The transnational meeting and students exchange mobility in our Croatian school partner "Osnovna Skola Pantovcak", in Zagreb., planned for the Erasmus+ "FULL STEAM AHEAD" project, has involved four students and three teachers from I.C. San Giorgio, Catania

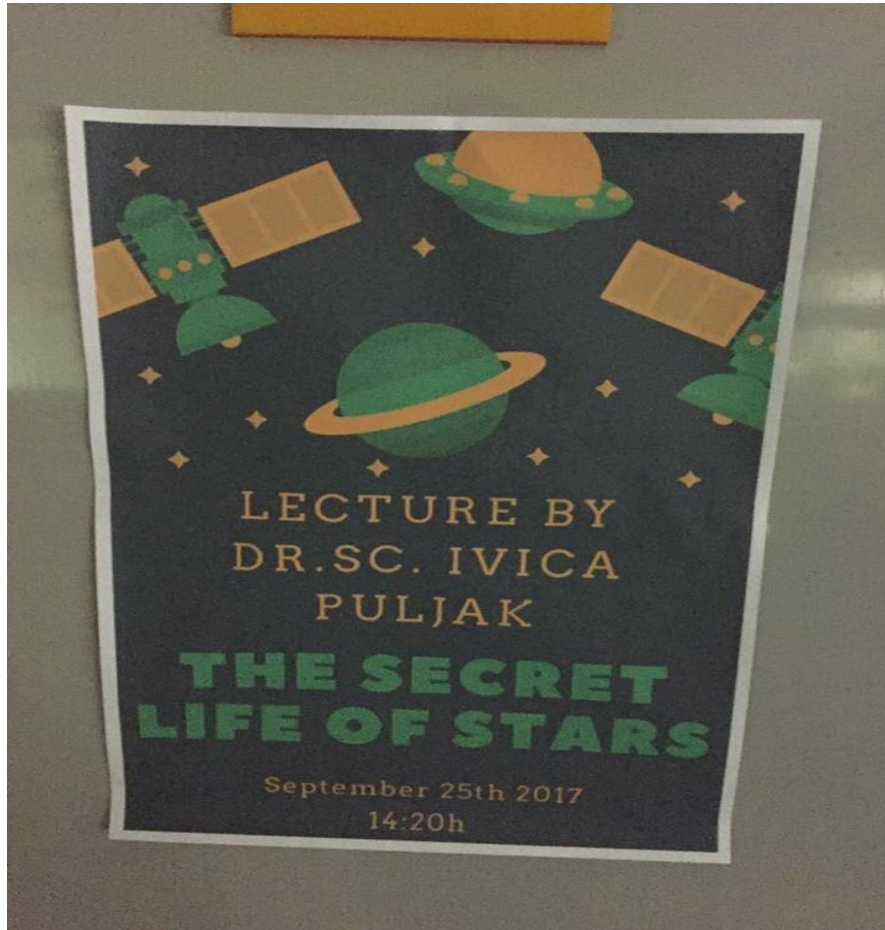

The delegations (Italy, Portugal, Ireland, France) have been welcome with shows and icebreaking activities :

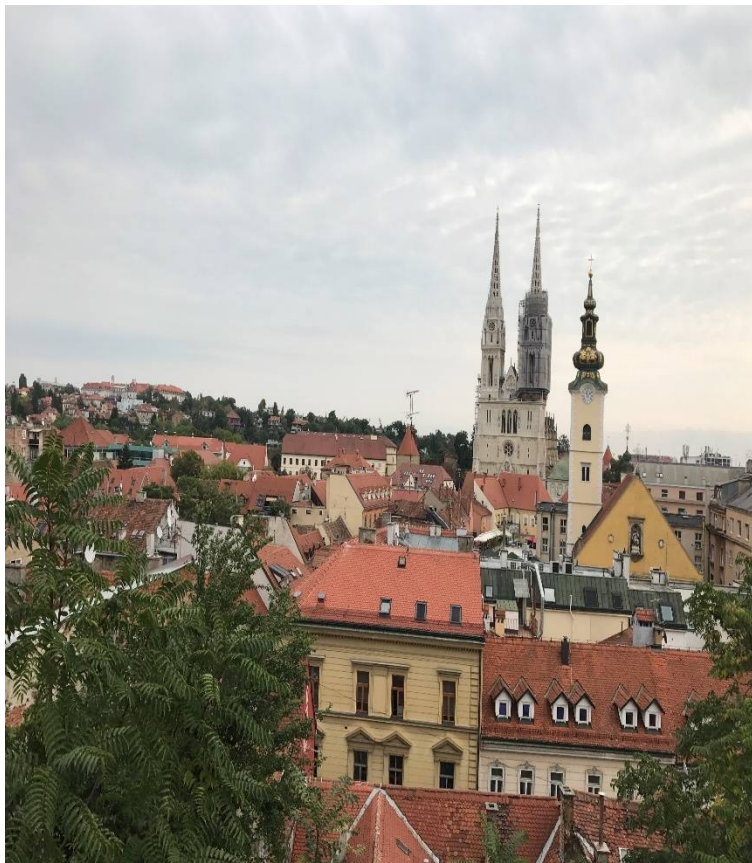

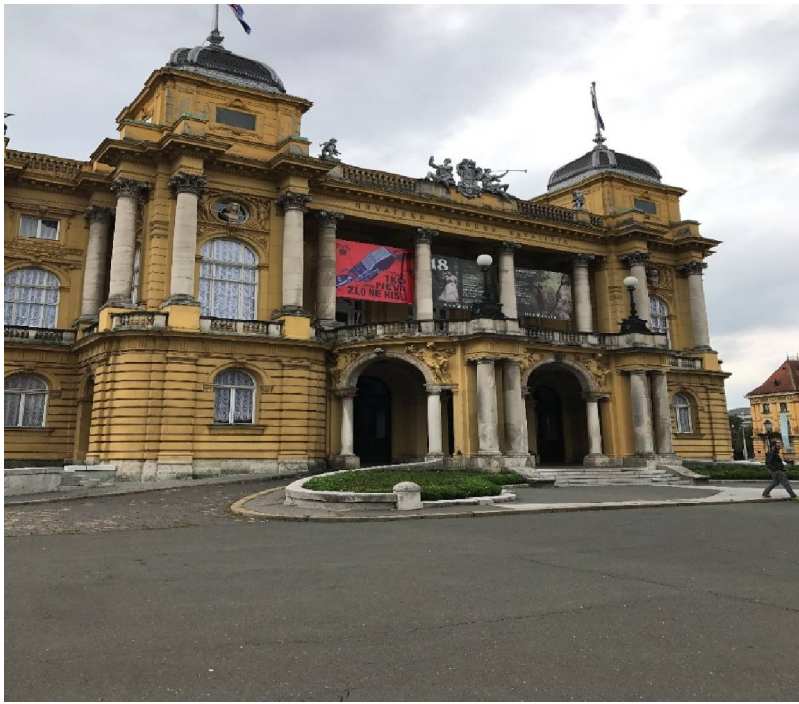

We met Ivica Puljak, a nuclear physicist from CERN, who held such a captivating lecture on the solar system and the mysteries of Universe.

The day after, by using the QR Reader app, students (and their teachers) have been discovering the city and its main monuments and buildings, with the final aim of creating a poster on Zagreb in the following ICT workshop.

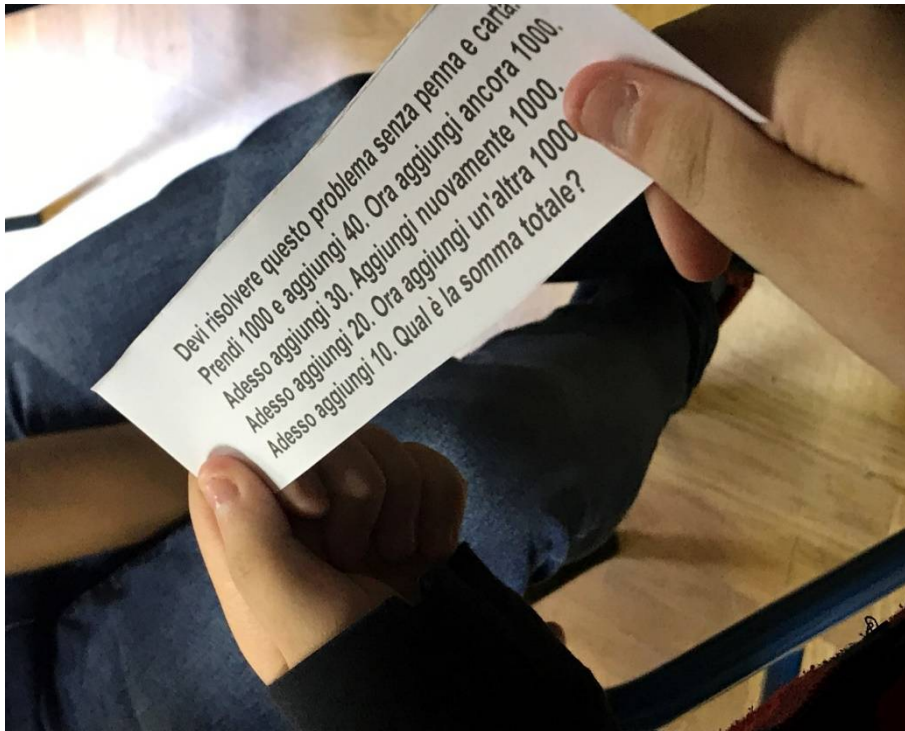

Students have also taken part to arts workshops and didactic-scientific games, such like “Escape Room”.

A whole day has been spent to a trip to Brijuni Island and the visit to the inside safari park, and to the Arena in Pola.

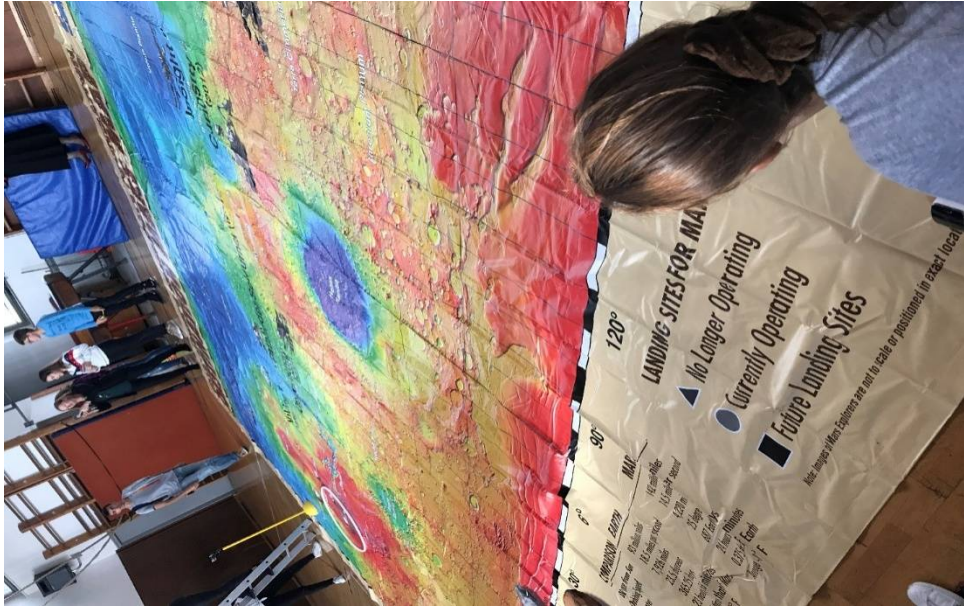

During the following days, students have been involved with different workshops: building a Mars habitat, designing a brochure to promote a trip on Mars, creating a rover and a lander, followed by the presentation of the launch and the landing on a giant Mars map.

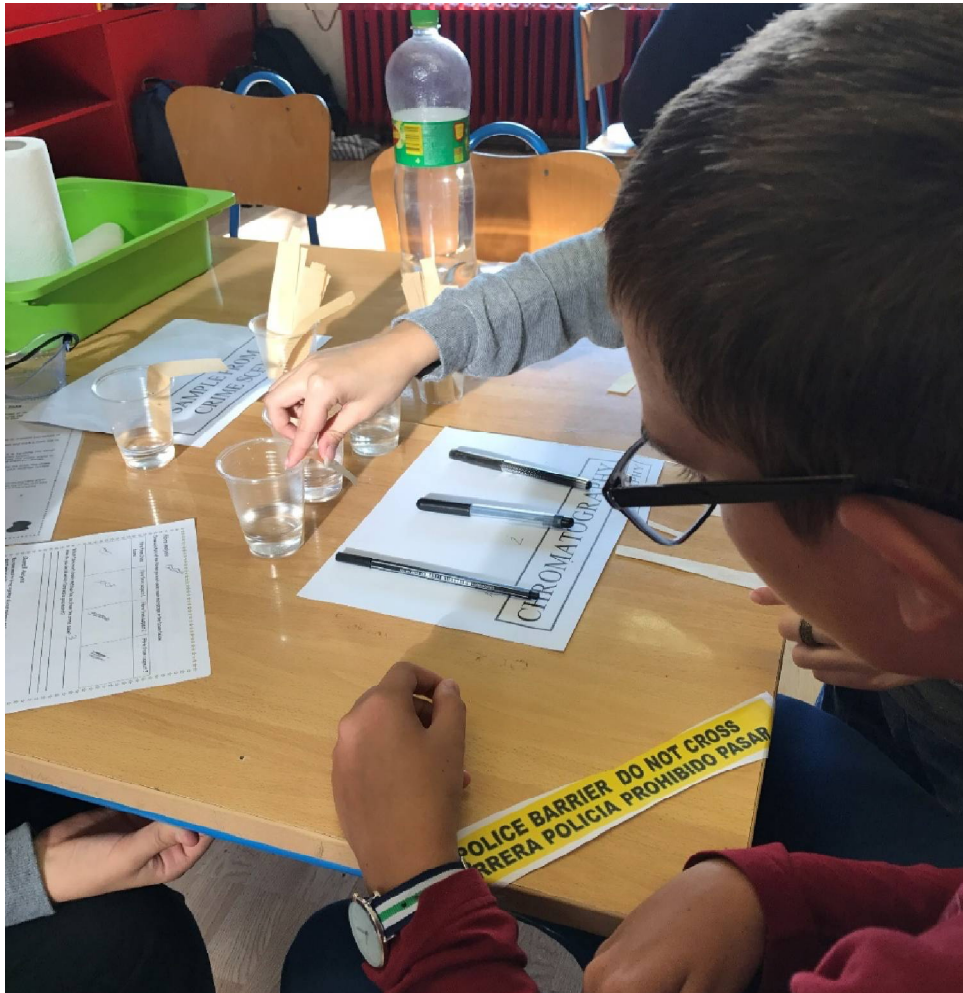

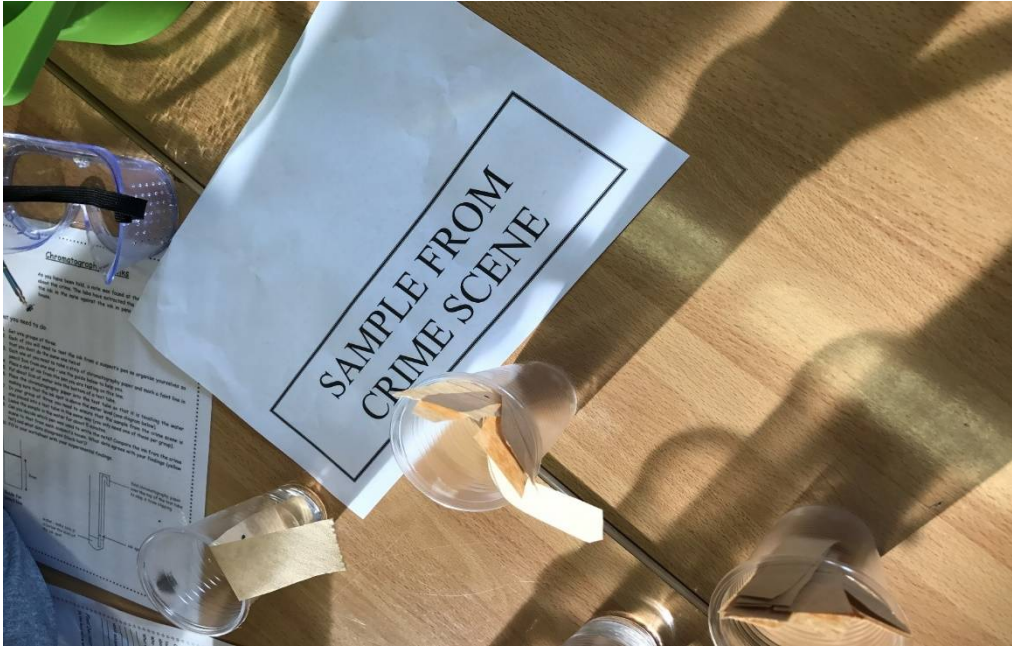

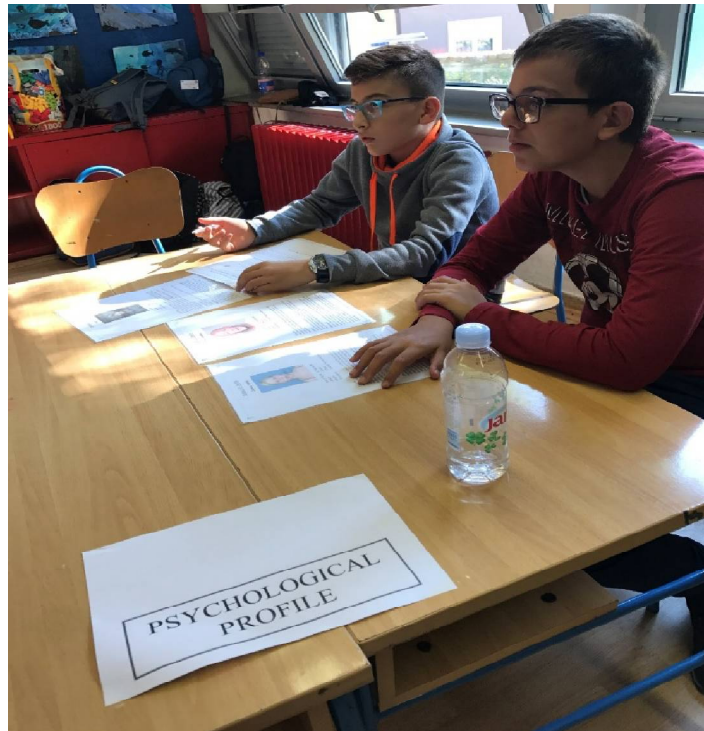

The last day has been dedicated to the Kahoot assessment, and to a very nice and amusing workshop, in which they were wearing the cloak of scientific investigators ("CSI- Me as a scientist").

All the students, in closing, have written their own impressions about the Erasmus+ experience on a wide sheet, exhibited in the big gymnasium, where the final party has been set: traditional dances, exchanges of gifts, discomusic and games have assured great fun!

A further positive experience for our students; not only has it represented a cultural and linguistic enrichment, it also has let them confront with their pairs and get to know daily family routines, at times a bit different from their owns'.

Tu us teachers, the transnational meeting has meant a further opportunity of confronting with different ways of working, planning, and participating to the educational growth of the students, and it has allowed tightening and/ or establishing relationships with our European colleagues!

Next meeting will be held in Italy, Catania: we will have the opportunity to introduce our guests to the many treasures of our country!
