

We came to Finland having a big curiosity concerning the world's greatest educational system.

The school's amenities and its material resources awed us: we've learnt through games together with the students, we've learnt how to have a logical-mathematic thinking, how to build different objects, to sing and be relaxed in the same time. We've learnt the importance of discipline in the process of learning and we also observed many disciplinary techniques, which will be applied by us in our lessons.

We've been nicely surprised and we observed how teachers work and manage to transmit the exact information to their students through different techniques, which perfectly illustrate the title of our project "Learning by Doing". Even if there is a big difference of material equipment when comparing Finland and Romania, we can say that we've "stolen" many ideas and we leave from Finland having and acquiring knowledge and new techniques of teaching, which will help us in improving our teaching methods, in applying them to our pupils too, but also we've achieved a different way of thinking. All these skills will help us in being more interactive and to present our lessons in different and interesting ways.

For us, "Learning by Doing" in Finland was an unforgettable and unique experience.
