

Going in plant nursery

- Make cutting

the cutting consisted of two stages the preparation of the branch which consists in cutting the leaves except the last 3 and the second stage which consists in putting a powder which makes it possible to accelerate the growth of roots then to plant them in a suitable ground

- Repotting

the report consists of putting the developing plants in a pot more suited to their size so they can develop better until they are planted in a suitable environment once mature

- Transplant

transplanting consists of moving young shoots in pots to allow them to grow while waiting for their report when their size will be adapted

- Visits

But this day was not only activities it was also an educational visit, we were explained to concepts like endemism (plant that grows only in one place) wintering (the fact of preparing a plant to endure winter) and concept of the nursery profession
