

## Reflection

Aiyana, Alisya, Rike and I (Neele) presented our app „Quizlet" on 21.01.2020, in the English class of 10bili.

The app allows you to learn vocabulary quickly and easily with the help of digital flashcards. The student can expand his knowledge in different modes.

At the beginning of the lesson we briefly introduced the app and explained how it works. Afterwards the students had ten minutes to learn the vocabulary. Finally we asked them the vocabulary to check how well the app works.

It came out that the students were able to learn the vocabulary well after such a short time.

During the presentation we had no problems and the students could work independently without help. This shows us how simple the app is.

After the lesson, we talked to the teacher about what she thought of the app and whether she would integrate it into her lessons. She was enthusiastic about the app and would like to include it in her lessons.

### Positive about the app:

What we liked very much about the app is that it is quick and easy to understand. Also, you don't always have to learn the vocabulary on your own and you can play with your classmates in game mode. Furthermore, not every student has to create his own flashcards, it is sufficient if one student creates a learning set and makes it public for everyone or uploads it in a pre-created class.

### Negative about the app:

The only thing we have to criticize about the app is that it needs an internet connection and you can't learn the vocabulary on the go. However, you can get the premium version, which allows you to download the vocabulary.

### Closure:

In the end one can say that the app is very well received by students and teachers. It is also simple and easy to understand. Moreover, it is not only useful but also fun.
