

BLABLA
GREECE- FEBRUARY 2018

Hello partners! I hope February was a good month for you... The last month of winter but full of joyful activities. In February we usually celebrate the Carnival. This February we decided to dress up in fancy or scary costumes and celebrate the Carnival with a parade inside the school area and lots of dance. Every year we are looking forward to this day, as we have fun with our classmates, especially when we try to find who is who, when everybody is dressed up. Here are some photos of our festivities!

All the teachers danced with their classes.

Here are some of our favourites!

Our teacher of Music dressed up as Pippi Longstocking

Thessaloniki Science Center and Technology Museum

In early February our 4th Graders also visited the Technology Museum of Thessaloniki. This was very interesting as we visited many exhibitions, one of which was the Technopark and the “Nicola Tesla” temporary exhibition. In the Technopark we experimented with different machines and we participated actively as it is a place of interaction. We tried to understand many scientific principles by experimenting. It was great fun and we learnt a lot about Physics and our Universe!!

In the Nicola Tesla exhibition we saw all the devices or equipment Tesla invented and saw a documentary explaining why he is considered to be the most significant inventor of the 20th Century. Inventions like X-rays, electricity, wireless technology and radar were presented to us by experts who explained the terms in simple words so we can understand. The most impressive was the vertical take-off plane, the induction motor and the Tesla coil!!
