

"OUR LITTLE HERBS GARDEN"

During the first part of the school year, pupils of the 1^A and 1^B in "Via Lanciano" Primary School created a "green" corner in their classroom.

First of all students studied that growing plants indoors requires the same basic elements as growing plants outdoors: a lot of light, replacement air, nutritive soil and the right amount of water (they learnt to water plants when the surface of the soil is dry to the touch).

Then they started sowing seeds of different aromatic plants in a very little terrarium. After some weeks some seedlings developed a robust root system and strong stems, so it was possible to move them to some pots. In the same period pupils produced an "identity card" for each plants, describing them with the help of the fine sense.

To well study and remember the features of each plants, students invented a special grid to use the Blue-Bot.

In March the herbs garden partecipated to a competition and it was rewarded!
