Scuola secondaria di 1° grado Antonelli

This is our fourth year that we organize this kind of event at school.

We started with only one teacher and fifty students and now we had involved all the Institute. We believe that engaging educational materials for robotics and programming will play a major role in cultivating STEM literacy and nurturing the next generation of creative problem solvers.

So, more than 100 teachers and 1300 students, from five to fourteen, took part to the marathon of coding and robotic, a sort of relay that' started from the Nursery school and ended with the pupils of the Secondary school.

According to the age of the pupils teacher organized different coding activities both unplugged and with pc/tablet and smartphones.

In order to share all the experiences the ICT coordinator of the Institute created some padlets, online virtual "bulletin" board, where teachers can collaborate, reflect and share links and pictures.

Those are some pictures taken from the “Padlets”
