

GREECE JANUARY 2018
BLABLA

In January our little students from 1st and 3rd Grade visited a park in the International Exhibition Centre of Thessaloniki, where dinosaurs were exhibited. It was really fascinating to learn about the lives and habits of these prehistoric animals. The dinosaurs were huge robots which moved and sounded like real animals, so it was really like travelling back in time!

We also learnt a lot about their eating habits, their height and weight, their speed when running and other information which helped us form a detailed impression on those distant ages....

Also, we learnt a lot about the environmental changes throughout the ages and how this affected the climate on earth. We were guided by an “explorer” and we were divided in small groups so we can understand better all the

information about the dinosaurs. Our tour lasted over an hour and we left from the Exhibition fascinated!!
