

During this project, an attempt will be made to break the stereotypes concerning “Mathematics”. Maths is often considered to be a difficult school subject and it is usually thought of as being an abstract notion, standing far from our everyday life.

This project will hopefully bring out the essence of Maths in all aspects of our everyday life. Via transitive school activities and workshops, Maths is expected to be redefined as an approachable school subject and as the science that is practically embedded in all aspects of modern human life.

Furthermore, this project encourages the pupils to later choose career paths connected to Maths or choose to do mathematical research in this field.
