

Multimedia Job Sheets and Assessment Test with Wizer

 It is a powerful tool. Teachers from all over the world have "embraced" it because of the ease of use and the choices it provides, and its for free as well! Let's create a worksheet with a few quotes, some activities, sources of information, etc. Those who have created something like this know that you may need a whole day (maybe more) to create something worthwhile.

Most likely, even after so much trouble, that is when students get it in their field of accesibility, it may still be an indifferent piece of paper for some. Imagine all the above being presented in front of a computer screen, with a beautiful multimedia environment, enriched with video images, etc. Even the most "tricky" student will be impressed and will want to use it and you will not have to try hard to create it.

Visit the [official website](#) and register as a teacher:

Create your free account

I'm a...

You will be asked to fill in your profile with your specialty, the age group you are taught and the country and you are ready to create. Click **Create New Worksheet**:

Once you press it, you will be surprised by the options available. In the left column you will find a lot of stock templates for the calibration of your creation and in the center you will find all the tools needed to create modules and exercises. Really incredible choices. Multiple choice, gap filling, short-answer, matching, sorting, inserting images and video and integration code, only some of the available tools.

Give a title to your worksheet and add text, video, etc

Let's now look at an example with matching questions. Select 4 of the words in the table

BIODIVERSITY	The total variety of living organisms
SPECIES DIVERSITY	The variety of species per unit area
SPECIES RICHNESS	The number of different types of species within a habitat or ecosystem.
SPECIES EVENNESS	The relative abundance of each species within a habitat or ecosystem.
HABITAT DIVERSITY	The range of different habitats in an ecosystem.
GENETIC DIVERSITY	The range of genetic material present in a population of a species.
GENE POOL	All the different types of genes found within every individual of a species
MASS EXTINCTION	The disappearance of large numbers of species during a relatively short period of geological time.

If you wish you can still write your question! So easy!

After you create the worksheets, you will go to the second step (**Assign To Students**) to assign the worksheets to your students:

And here are the countless choices. Name the worksheet and assign the pages to the students, via a link, embedding to the site, and popular e-class tools such as Edmodo and Google Classroom. Do not forget to turn on the student's automatic **feedback** to see the correct answers afterwards.
