

# Fortnite

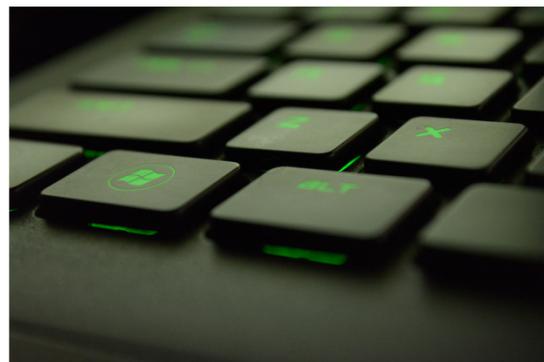

**Fortnite is a videogame that you can play on Playstation 4 or 5, PC, XBOX, Nintendo Switch or some mobile phones and tablets**

This video game is from epic games company. Fortnite has the Unreal

Engine graphics engine

Creative

# Game mode types

We can play alone or with friends.

There's solo duos trios and squad (4 players) in survival mode and creative.

We can play creative mode: it's a world where you can create your island with the freedom you want building a lot of structures.

Survival mode: in a island with other 99 players and the eye storm which becomes smaller until everything is covered and takes hitpoints.

The last one standing wins the game.

Save the world: save the world from the zombies

# **GUNS, COSMETICS AND ITEMS**

There are different guns, rifles, snipers, shotguns, submachine guns, also are items to heal, bandages, medkits...

You can choose one skin to play but you have to get Vbucks, the Fortnite money.

Fortnite is played competitively or casual.

# *Builds*

In fortnite you can build a wall, ramp, roof or a floor. There's three materials that you can build, wood, stone, and metal. The wood has less HP but builds faster, the stone has more HP than the wood but builds slower than the wood, and the metal has more HP but builds slower than the stone.

# TOURNAMENTS

There's a lot of tournaments, the most important in lan are the world cup and the dreamhack. But exist other online like FNCS (fortnite champions series) or the cash cups
