

Wednesday

On Wednesday we spent the whole day at school where the day began with a presentation by two Greek students about hydrophobic and hydrophilic plants. The plan was to get an idea of how plants use this ability to retain water. With the help of that inspiration, we then got to design our own water containers in groups with - of course - inspiration from nature. We used tinkercad to design our containers and then presented them to the other groups. The best container was physically printed.
