

## Monday:

On Monday we were first in the Greek school where we got an introduction to biomimetics and SIBN (Solutions inspired by nature). We looked at various animals and plants, that we humans have been inspired by, to invent, such as lotus leaves to create hydrophobic surfaces and a wetsuit inspired by shark skin to reduce resistance in the water. Afterwards, we walked around the city of Alexandroupolis and looked at some of the more well known sights and got to learn a little about the city's history. The most notable sights were the Thrace museum, the city's largest library, and a lighthouse by the coast. It was a fun day full of activities, and we thought it was exciting to learn about biomimetics and to see the city we lived in.
