

The Crown

Our water collector is called The crown!

It is a combination of the Baobab, Dracaena Draco tree and lotus flower.

The chemical properties of the Crown leaves are responsible for the absorption, direction and storage of the rainwater.

The trunk which works as a reservoir comes from the Baobab tree, the leaves of the rosettes are from the draco tree and the structural and chemical nature of the leaves, consists of hydrophobic and hydrophilic compounds as well as lotus flower.
