7th Monday	Farewell greetings Departure of participants

# **WORKSHOP:** sharing of teaching materials, exchange of good practices and bureaucratic and administrative aspects (6 hours)

# TRAINING COURSE ON ASTRONOMY EDUCATION BEGINNER LEVEL (8 hours)

The training course is developed in 15 hours with the aim of providing a general view of our sky, susceptible to further investigation. The course aims to offer not only the knowledge to teachers but also the tools to teach the topics addressed. After an introduction, dedicated to the basic elements of the terrestrial orientation, in order to structure a clear picture of the distribution of partners in Europe, we deal with knowledge related to daytime orientation, to our solar system with particular reference to the Earth-Moon system and nocturnal orientation. The themes are conducted through laboratory activities with the use of different worksheets which, collected in an orderly way, represent the Astrodiary you are going to make with your students. The course also provides the tools necessary to collect data on the daily and annual arc of the Sun, on the moon phases and on the annual variation of the position of the constellations in the sky.

# **TRAINING COURSE ON THE ETWINNING PLATFORM**

**with a local eTwinning Ambassador  
(Prof.ssa Patrizia Roma)  
(3 hours)**
