

Thinglink

A screenshot of a ThingLink video overlay. The overlay has three main buttons: 'Embed media' (with a video camera icon), 'Share link' (with a speech bubble icon), and 'Publish to social' (with a social media icon). Below these is a section titled 'Embed code:' containing a code snippet. A red arrow labeled '1' points to the 'SHARE' button in the top right corner of the overlay. A red arrow labeled '2' points to the text 'Copy the code between: src=" ' " Copier le code entre : src=" ' ".

If in Panorama360 app we create an account then the photos can be hosted in teleportme.com (the site that hosts the galleries of the users of Panorama360) and from there we have the option to get an embed code for publishing the photos in twinspace pages without the use of panoraven or of Thinglink. (Thinglink though gives the option of adding interactive elements onto our panoramic photos)

Thanks. I have the feeling the 360° pics have some problems loading. Could you check, please, if that is a general problem or just here, with me.

Not sure if Twinspace won't become too 'heavy' with lots of embedded material.

@Andrea

Embeding in twinspace is one of our concerns, too. My opinion is that it will be no problem as the photos will be distributed on partners pages

And your page is loading absolutely fine just now that i tested it

The screenshot shows a ThingLink media card titled "Gymnasium Georgianum". The main image is a 3D rendering of a school building with a red brick roof and green grass. A "Made with thinglink" watermark is visible in the bottom right corner. On the left, there's a sidebar with a navigation menu including "Home/Accueil", "Around the Sun/Autour du Soleil", "Center of Eu/Centre de l'Eu", "Communication", "PLANETS (SCHOOLS/ECOLES)", and numbered links from 1-Sun to 5-Mars. Below the sidebar are buttons for "Archive" and "Create a page". At the bottom of the card, there's a link "Take a closer look inside".
