

## Products

Norwegian (type) pre-cut in high, handcrafted log homes, saunas, bungalows from naturally dried Lithuanian pinewood.

## A brief description of the production

Houses are built according to the traditional methods of old Scandinavia. The first of the two sides of the logs are sawn, that the wall would be the same thickness - 16 or 20 cm, and then the bark is harvested. The next stage is carefully selected and naturally dried, grind and chop up at the factory.
