

"It was a little bit difficult with the language the first two days," says student Christoffer Kullman.

"And just when you had come to know where to go, you should go home," continues Kenny Qvarnström.

The vehicle program at Falkenberg Gymnasium will build an electric car along with similar programs in France and Spain, as part of an Erasmus project.

"If there were an opportunity after school, it would be fun to practice there," said Mattias Caspersson and Rasmus Carnefjord.

The students arrived late at night and were incarcerated in new host families.

"You learn to be understood. If you were shy before it disappeared, says Christoffer Kullman.

The schedule included a lesson in sustainability. They also had to build a model in foam plastic and use a 3D printer.

The car building will work as a hangover when students from Seville will make the frame. Then the car is sent to Sweden where the Falkenbergs will make suspension and suspension. After that, the car will be sent again.

"The car will be small, not so clumsy," says Kenny Qvarnström, who really likes big diesel cars.

What are your goals with the car?

"It would be cool to challenge Teslan. At least on any part of the car, the students say.
