Dear Denis and all the members of the project.

The Spanish team has been meeting this morning to assess the whatshap we received from Denis about the Car body.

In the first place we do not understand how a company went to make some calculations to carry out a program to print the body car and that also did a training for teachers in the Caen Project meeting and now it is not able to perform the printing.

In addition it has had an economic expense that has not served for anything. We find it very unprofessional by the company.

The initial idea was that the body car was finished in Seville for March mobility, but after assessing the time we have left to finish it once the car arrives in Seville for us it is materially impossible to finish it on that date.

Impossible because we have no design, we do not know what material and ultimately if the car had been in Seville in November we would have had time to do it.

But the vehicle went to France for the company to do the body car and we lost 3 months of work.

As Denis says in twinspace we will have the space for the three countries to design the car body, choose the material of the car body and the work process to finish it in Spain before the project ends on 08/31/2020.

We think that in mobility in Seville we could have part of the work done if before we can specify what type of design and material we are going to use.

With respect to the Seville program, it will continue to be very similar except that on the last day we had prepared the final moment of the project with the vehicle finished, with the final test, with the invitation of authorities of the city council of Seville, of the Salesian congregation and of the press , will now be less relevant.

Also tell you that the body car is in Madrid and in the next few days it will arrive in Seville, although we have to rent a machine to get it off the truck.

Finally tell you that In Twinspace, in pages we have a new folder for the design of the new "body car" where we will work the three countries to do the last project work to finish it.
