

The Christmas balls' journey

It was the week before Christmas. All the Christmas trees were decorated, but not the one from a little girl called Maja.

In a dark corner of her room there was a box with Christmas decorations.

It was full of colourful glass balls, shiny lights and small figurines depicting the Nativity Scene. The decorations decided that it was enough for them to sit all day and hide in a dark box. „I want to see what is happening outside the box“, said the glass ball Klara. The other glass ball Laura said: „Let's go to that old man we heard he was lonely“, the glass ball Lana said: „He lives in the North Pole“. The balls Laura and Klara decided to go on a journey.

They were travelling days, nights, through dark streets. They passed across Lithuania, Greece, Portugal, Slovakia, Bulgaria... Not knowing where they were anymore, the decorations reached a tree market in a small town. The tree market was almost empty, everything was already sold out.

There they met the Christmas tree Jela. She was very sad and lonely because she was left without her friends. To cheer her up they decided to stay with her. They prepared a big party and decorated her nicely. Shiny balls, glittering lamps, wooden figurines flew all over the shop ... In the end, the whole market enjoyed the Christmas spirit. People who were passing by were amazed with the Christmas spirit they saw.

The next day while Jela and the decorations were still sleeping, the lorry came. The lorry drove away Jela and the Christmas decorations. When they woke up, they realized they were already on the North Pole. They explored the North Pole until they saw a small house. When they came in, they saw a big armchair where the old man was sitting. The Old Man was Santa Clause. He gave them warmth and love.

From that day on, the little tree Jela, full of decorations, had friends and a home. Jela and the decorations spent their days together hanging out and experiencing new adventures.
