Rocks, Stones and Minerals

Unfortunately, as soon as we started to work on this subject, Covid-19 forced schools to close and the lockdown took place. But my wonderful pupils continued to work from home, helped by their families. They really loved the subject, and even if we couldn't do exactly what was planned and in the way it was decided, all of them tried their best with the resources and material they had.

Luckily we were able to examine rocks and stone together at school, also using the microscope and MakeyMakey. Then, that same day schools closed. So pupils started to collect stones in their home gardens and created their lovely paintings and landmarks heritage activities; soon after that I asked them to make a stone clock as a reminder of our daily online meeting (11 o'clock).

At school we also started the crystal making activity, but we are not going to know what happened, so pupils try it at home: some of them had lovely crystals!

Great job!!
