

Theme: Water

Subjects: Science

Activity title: Will it sink or float?

Recourses: Big bowls with water, various materials like cups, leaves, and pencils etc

Aims: Make a simple experiment, observe, take results collaborate record the results and make the conclusion of what materials float or sink.

Teaching-Learning activity

The students in pairs choose 3 random and different objects from the classroom or the school yard. They talk about materials and wonder if everything can float or sink. The students say their opinion about different materials and their predictions about that.

They observe the three different objects made from different materials if they float or sink. They take notes.

They announce the results of their investigation and they gather the results of all pairs.

They make two different panels and group their results .They make conclusions about the initial question.
