

*Our trip to Cyprus has been the best school experience ever lived up to now. It combined moments of involving study with moments of great fun. In the morning we worked on the creation of our start up, while in the afternoon we went sightseeing and visiting places of interest and in the evening we went out and had dinner together .*

*We also had the opportunity to attend some experts' lessons and one of these was about pottery . Everyone tried to shape clay into objects and together with my teacher I won the first prize for the best production.*

*The funniest night was when we ate the typical recipes of Cyprus in the school gym and sang and danced all together. I honestly didn't expect to have such a meaningful and fun experience. This was my first trip lived twenty-four hours a day with people from different countries with whom it seemed we had always known each other. This experience was very important for me because I learned many things and improved the relationship with my Italian and foreign friends. They are very nice and funny people and I am sure that I will remember them and this experience forever. I also hope to have the chance to live other experiences like this.*
