

Falconara castle

Javier castle

Falconara Castle, locally known as Castello di Falconara, lies east of the city of Licata, in the Caltanissetta province on the island of Sicily in Italy. In 1392 the site of Falconara and the County of Butera were granted to a Ugone di Santapau, by King Martin I of Sicily, as a reward for his support against opposing factions. Somewhere between 1392 and 1422 a square tower was built here, for coastal defense. During the 16th century Falconara Castle was enlarged and strengthened. In 1540 the Principality of Butera went to the Branciforte family in the person of Ambrogio di Santapau Branciforte. Falconara Castle served to monitor and defend the coast against pirate raids.. At the beginning of the 19th century the Princess of Butera, Caterina Branciforte, married a Hanoverian officer and diplomat, Georg Wilding. He enlarged the castle, turning it into a manor and built a section with a balcony and terrace facing the sea, which connected to the castle through a staircase.

The castle and village of Xavier were won by [Sancho VII of Navarre](#) in approximately 1223. An Aragonese noble got a loan of 9,000 [sols](#) from the King of Navarre, with the latter receiving Xavier as a warranty. The Aragonese noble could not afford to pay in due time, so the stronghold became property of Sancho. It was not the first time nor the last, since Sancho VII was one of the major lenders to the [Crown of Aragon](#), and took over a number of villages and castles in return for his unpaid loans that notably strengthened of his border with Aragon: [Escó](#), [Peña](#), [Petilla](#), [Gallur](#), [Trasmoz](#), [Sádaba](#), etc. In 1236 the castle was handed over by King [Theobald I](#) to Adán de Sada.

Solve the problem

The cook made some cakes for the Prince's daughter's birthday party : In the kitchen there are tree shelves that have three floors each. There are 3 cakes on each floor. The cakes have 3 candy cherries each. How many candy cherries can you find on all shelves?
