

WORKSHOP

RECYCLING CAN BE FUN

Recycling is the process of converting waste materials into new materials and objects. It is an alternative to "conventional" waste disposal that can save material and help lower greenhouse gas emissions. It can also prevent the waste of potentially useful materials and reduce the consumption of fresh raw materials, reducing energy use, air pollution and water pollution.

Recycling is a key component of modern waste reduction and is the third component of the "**Reduce, Reuse, and Recycle**" waste hierarchy.

Recyclable materials include many kinds of glass, cardboard, paper, metal, plastic, tires, textiles, batteries, and electronics.

What **material** have we recycled?

old socks
toilet paper rolls
cardboard
plastic bottles
cans
jars
napkins
wax crayons
cloth
buttons
cotton
pet tops

What **products** have we made?

toys
pencil holders
cloth bags
recycled crayons
cussions
flower pots
bracelets
notepads
coasters
