

THE PUPILS OF OUR INSTITUTE "SCIENTISTS FOR A DAY"

A group of about 40 students from the first classes of the secondary school of our Institute meet the scientists of the University of Tuscia, in particular Professor Raffaele Pelorosso who accompanies them to visit the Agricultural Company of the University. Our students step into the role of small researchers and see for themselves what scientists at the University are experiencing in the field of NBS (Natural Based Solutions).

Dr. Raffaele Pelorosso PhD, researcher at the University of Tuscia at the DAFNE, Department of Agricultural and Forestry Sciences, of the Faculty of Agriculture, explains to our children the structure and essential elements of the "green roofs", their classification, their use and their beneficial effects in the fight against pollution and climate change.

The children's questions demonstrate their interest in the topic, their sensitivity to extremely topical issues. The feedback is extremely positive, as evidenced by their reports on the subject and the description of their day, from which iconographic representations and slogan phrases emerge for a behavior of respect for the environment in which we live.
