4.The things that sea turtle told us.

What we are discussing is that the 「Sea turtles teach me the plastic.」 First, We will find the problem of plastic pollution to marine organisms and then we are going to find out a best solution. Finally, it is time to do our best to protect ocean.

How does Green turtle eat jellyfish?<https://youtu.be/-3S6jHYos14>

 The biggest sea turtle of world-Tortoise Turtle

The ecology of the sea turtle

1. Only one species on the earth:
There're 7 different kinds of sea turtle, we can see 5 species sea turtle in Taiwan, which is Green Turtle, Loggerhead Turtle, Hawksbill Turtle, Olive Ridley Turtle, Tortoise Turtle, and the tortoise turtle is the largest one.
2. Food: Jellyfish. Baby green turtle eat seaweed.
3. Laying of eggs: the sea turtle mother lay eggs on the beach, about 100 to 150 births. They like to choose a sand beach.
4. Only one baby sea turtle in 1000 survived.
5. Threaten: The biggest threat to sea turtles is human beings because humans continue to discharge garbage into the sea so that the turtles are artificially rubbish in their stomachs.

Marine plastic waste has become one of the most serious environmental problem of our time, comparable to climate change, ocean acidification and biodiversity loss, and continues to deteriorate. This year, marine ecologist Chris Wilcox. a global-scale study published predicts that by 2050, 99.8% of the seabird species they study will ingest plastic.

Other creatures are injured by plastic items
