

Nuclear Power

1. very low pollution and has a lot fewer greenhouse emissions
2. reliability: With the current rate of consumption of uranium we have enough uranium for 70 to 80 years.
3. Nuclear reactors have been heavily upgraded and people have learned from history
4. Nuclear plants produce very much electricity (about 1300 megawatt a year), which can provide electricity for large areas.
5. Nuclear plants create jobs, one nuclear plant makes 600 to 700 job applications.
6. Nuclear plants may cost a lot of money (5 to 8 billion €), but after 5 to 6 years you will get your money back and you will receive more money.
7. Nuclear reactors can produce a lot of electricity in a short period of time.
