

What happens to wastes on the ground

Indonesian, Thailand, Vietnam, The Philippines and China, these five Asian countries alone account for more than half of the global oceanic plastic pollution. This is over 4 million tons of plastic waste which is discharged each year, it's the seas and oceans.

There are multiples solutions to clean our Earth:

- For example, in Australia, they have found a simple solution to clean the water: they put a net at the beginning of the lakes and the rivers, it stops the wastes and keeps the water clean.

- **The choices that we make everyday can help to make a difference:**

1. Commute smartly by walking or cycling to work or the shops instead of driving. Motor vehicle emissions remain the most significant source of most common air pollutants.
2. Save energy, by turning off the television and make sure you flick the light switch when you leave the room. Not only will you save money on your electricity bill, you will be reducing emissions from coal-fired electricity plants.
3. Use environmentally friendly cleaning products.

There are multiples reasons to stop pollution:

- In Wallonia, it's possible to have a penalty of 100 euros if you throw your cigarettes; bubble gum and rubbish on the street.
- It affects the quality of the air you breathe and your food. The water that you drink contains multiple wastes and plastics particles. It can affect your health.
