

# Climate change and human beings

How do people cause climate change? How are people affected by climate change?

SEBLA DÖNER FEB 12, 2018 06:41PM

## Influencing climate change

### How do people cause climate change?

The climate is changing, but how? What are people doing to change the climate? Tell us what you know.

### REDUCE THE USE OF PLASTIC

I think people should reduce the production of plastic, because plastic is impossible to destroy.

They can not be burned with fire because they cause air pollution.

Air pollution is severe in many parts of the world. Nine out of the people in the world breathe the polluted air, and the number of air pollutants is everywhere. No matter where you live, you can not escape. Subtle pollutants in the air break through our respiratory and circulatory systems, and damage our lungs, heart, and brain.

Well, in my opinion we are definitely the main reason for climate change and to be honest I think that the ignorance that some people have about this subject is one of the factors that cause a lot of problems. To make myself clear, by "ignorance" I refer to our capacity to not understand how important this problem is because we refuse to take it serious and we don't do enough research that could help us extend our mentality and think outside the box. Some people don't realise that we arrived at a point with no return and think "a single person won't change anything" referred to themselves, that way we won't be able to unite and make any changes. Apart of "don't use plastic and don't throw garbage on the streets", our mentality and understanding have a very important role in us, affecting climate change.

Andreea

### climate change (marty)

men with badly distributed CO<sub>2</sub> causes global warming which leads to change climatic making the seasons lose their rhythm and therefore change the climate. climate change hurts us a lot areas of the earth that were once thriving are now arid areas and this leads to the lifestyle of the people who are in that place. we are destroying ourselves we must wake up

bd

### The climate change damage where with...

The climate change damage where with the air Because, the air is dirty and fogish.

The climate Change damage where too with garbage. Because the garbage lies everywhere around.

### The people

The people burn fossil fuels, such as oil, etc., or deforest and burn them, they produce a large amount of carbon dioxide, which is a greenhouse gas. These greenhouse gases are highly transparent to visible light from solar radiation and emitted to the earth. The long-wave radiation is highly absorptive, and can strongly absorb infrared rays in the ground radiation, causing the temperature of the earth to rise, that is, the greenhouse effect. Global warming will cause global redistribution of precipitation, melting of glaciers and permafrost, and rising sea levels, which will not only endanger the balance of natural ecosystems, but also threaten human survival.

On the other hand, due to the rise of continental greenhouse gas emissions, the mainland's temperature has risen, and the temperature difference between the mainland and the ocean has become smaller, which has recently caused slower air flow, and the haze cannot be blown away in a short time. Vehicle restrictions, production suspension and other measures have only short-term and partial effects, and cannot fundamentally change climate warming and smog pollution.

So I think people should reduce the amount of air harmful things.

### how do people cause climate change?

Scientists agree that today's warming is primarily caused by humans putting too much carbon in the atmosphere, like when we choose to extract and burn coal, oil, and gas, or cut down and burn forests.

### climate change

You all know climate change is real but first, what is climate change?

Climate change is a global challenge that has no borders and to combat it requires coordinated work by all countries. The main cause of climate change is global warming. Climate change is caused by an increase in greenhouse gases, deforestation, destruction of marine ecosystems, population increase etc. Experts agree that the Industrial Revolution was the turning point when emissions of greenhouse effect gases entering the atmosphere began to soar. The Industrial Revolution was itself borne out of smaller revolutions: agricultural, technological, demographic, transport, finance... From then onward, population growth (in 1750, there were fewer than 800 million people on Earth, whereas now we are over 7.5 billion), The main impact was the increase in the global temperature of the planet, which has risen 1.1°C since this period, although it is estimated that, by the end of the present Century, the thermometer could rise by 2.7°C even if national commitments to reduce emissions are fulfilled.

## people

Scientists attribute the global warming trend observed since the mid-20<sup>th</sup> century to the human expansion

People are reducing the use of plastic and everything that has a strong environmental impact.

I think they do well, to save the earth. If even if many still do nothing to contribute, I too am wrong a few times and in fact I am trying to improve every day, to help save our land.

Zakaria elfarkh

## Hello everybody

Hi there. I think plastic should be reduced because it won't go away in the environment for up to 450 years. I also think that one should fly less on vacation because the fuel is very bad. Therefore, you should avoid cars, buses and planes, for example.

Arda

## The People of the Earth

The People in the Citys pollute the City.

Always More People pollute the invirontmant and Are Not think highly of attention to what Couleur happen.

Not only the does the waste pollute the Earth, Bit also the smoke that is consumed.

For example:

Co2, cowmist, petrol and Mandy other things.

Many People destroy the animal's habibtat by falling the trees.

Hi there. I think plastic should be reduced because it won't go away in the environment for up to 450 years. I also think that

one should fly less on vacation because the fuel is very bad. Therefore, you should avoid cars, buses and planes, for example.

## The Climate...

may get Headache

The climate damage us.

Always more People make dirty the inveramont.

Examples:

The People throw the trash on the floor.

Or the People Smoking,throught it is the air dirty.

Or the Factorys bring smoke in stande and throught it is enn Co2.

We be ill.

We get a Diseases.

Examples:

Man may get Headache.

Or adominal pain.

The Damage ist verry dangerous for the Little Kids.

The Kids become faster Diseases.

## protects the environment

If people don't protect the environment, my pet dies. the human causes worse things such as smoking, driving, setting up factories without filters that turn the gas into air, throwing rubbish on the ground and throwing rubbish into the sea or lakes. mirac.germany

## NOUR AYADI FROM TUNISIA

### How do people cause climate change?

WHEN DID HUMANS FIRST BEGIN TO CAUSE CLIMATE CHANGE?

Experts agree that the Industrial Revolution was the turning point when emissions of greenhouse effect gases entering the atmosphere began to soar. The Industrial Revolution was itself borne out of smaller revolutions: agricultural, technological, demographic, transport, finance... creating a new model of

production and consumption.

The global temperature increase brings disastrous consequences, endangering the survival of the Earth's flora and fauna, including human beings. The worst climate change impacts include the melting of the ice mass at the poles, which in turn causes rising sea level, producing flooding and threatening coastal environments through which small island states risk disappearing entirely.

## The People

The people burn fossil fuels, such as oil, etc., or deforest and burn them, they produce a large amount of carbon dioxide, which is a greenhouse gas. These greenhouse gases are highly transparent to visible light from solar radiation and emitted to the earth. The long-wave radiation is highly absorptive, and can strongly absorb infrared rays in the ground radiation, causing the temperature of the earth to rise, that is, the greenhouse effect. Global warming will cause global redistribution of precipitation, melting of glaciers and permafrost, and rising sea levels, which will not only endanger the balance of natural ecosystems, but also threaten human survival.

On the other hand, due to the rise of continental greenhouse gas emissions, the mainland's temperature has risen, and the temperature difference between the mainland and the ocean has become smaller, which has recently caused slower air flow, and the haze cannot be blown away in a short time. Vehicle restrictions, production suspension and other measures have only short-term and partial effects, and cannot fundamentally change climate warming and smog pollution.

So I think people should reduce the amount of air harmful things.

## Affected by climate change

### How are people affected by climate change?

Write us your thoughts: how does climate change affect humanity?

### **WE HAVE TO LOVE OUR PLANET AND THE NATURE**

We can not destroy the creatures of nature

**climate change affects our health by all the pollution which at its turn is caused by all plastic thrown on the streets, or in the water (oceans, rivers etc.), and all the factories in the industry. The air that we breathe is polluted, the water that we drink is also polluted by all the reasons above, and this has a big part of influencing our health.**

Andreea

## Air pollution can damage human bodies

There are many potential effects of air pollution on health, from subtle physiological changes in the body to obvious symptoms such as itchy nose and throat marks, asthma, cough, chest pain or tightness. Patients with asthma or chronic respiratory disease are exacerbated by exposure to air pollutants.

Although the extent to which different people are affected by air pollution depends on different factors, people of different ages are affected by poor air quality, and the impact of air pollution on children and the elderly is greater.

A number of local studies have shown that there is an important relationship between the number of hospital admissions and premature deaths due to respiratory and cardiovascular diseases and severe air pollution.

So we have to protect nature!!!!!!

## Health

Climate action is just what the doctor ordered. And we mean that quite literally. Medical professionals have increasingly been **sounding the alarm** about the risks and consequences of continually burning fossil fuels.

Here's the problem. The same dirty fossil fuel emissions that contribute to the greenhouse effect can lead to respiratory diseases – such as asthma – in children and adults. And they can be quite dangerous. Air pollution kills an estimated 7 million people worldwide every year, according to the **World Health Organization**.

### How does climate change affect people?

The influences of weather and climate on human health are significant and varied. Exposure to health hazards related to climate change affects different people and different communities to different degrees. With climate change, the frequency, severity, duration, and location of weather and climate phenomena—like rising temperatures, heavy rains and droughts, and some other kinds of severe weather—are changing.

## Health

The problem is the people's smoking.

This pollutes the air and becomes sick.

And we not only have smoking polluting the air, but also factories and CO<sub>2</sub>.

## How are people affected by climate change?

climate change greatly influences public life the heavy floods that can also lead to disasters and the terrible heat brings health problems  
M

## Invirontmant

The people Smoking the Most People.  
The Inviromant is Not clean.  
Ist is Dirty and destroyed.  
The air is Dirty and this ist Danger dir the people esspeciely dir Little babys.  
Z.b. In China Must the People Mouthguard because the China Cline Found a bacteria That spread in the air.  
And this Ostberlin Good for us People.

## The People are sevely affected

If we or other People damage the inverament, than is it dirty.  
Not only we People are affected from climat and inveramont, but too the animals.

More and more People cases the threes.  
So not only do they get we do not air but too animals.

## noura ayadi 13 YEAR OLD tUNISIA

personally i think climate change is done by humans mistakes (extraction of oil , no recycling, cutting a trees ,...) it's a global challenge that has no borders and to combat it requires coordinated work by all countries.

## NOUR AYADI TUNISIA

### How are people affected by climate change?

Climate change also increases the appearance of more violent weather phenomena, drought, fires, the death of animal and plant species, flooding from rivers and lakes, the creation of climate refugees and destruction of the food chain and economic resources, especially in developing countries.

## Climate Change Effects

Among the fossil fuels, "coal" appears as the main responsible. While 27% of the primary energy demand is supplied from coal on a global scale, 43% of the energy-based greenhouse gas emissions are from coal. Coal is followed by oil with 36% and natural gas with 20%. Coal releases 1.7 times CO<sub>2</sub> of natural gas per unit of energy produced into the atmosphere.  
The impact of climate change is not just an increase in temperatures. As well as plants, animals and ecosystems, human communities are at serious risk as a result of factors such as drought, floods, severe hurricanes, increased frequency and impact of extreme weather events, elevated ocean and sea water levels, increased acidity of the oceans, melting glaciers.  
Human activities, greenhouse gases, aerosols and cloudiness in the Earth's atmosphere affects climate change. Largest known within human activities The reason is the burning of fossil fuels that release carbon dioxide into the atmosphere.  
you know that we are heavily affected by climate change. Unfortunately, fossil fuel use is one of the most important environmental problems of today, and although we know this, fossil fuels have become addictive factors for us. therefore, we should reduce fossil fuel use as much as possible to be less affected by climate change.
