

Make bioplastic with milk

Ingredients :

- 300 ml of milk
- 4 tablespoons of vinegar

Required materials :

- a pan
- very fine sieve (of coffee filters)

Measure of milk and add 4 teaspoons of vinegar.

Heat up the milk until it is hot, but not boiling.

Pour the mixture into the sieve over a bowl.

When it's cold enough, you can squeeze out as much liquid as possible.

Now just mold it into a shape and it will harden in a few days. You can use pastry molds.

Let it dry for a few days.
