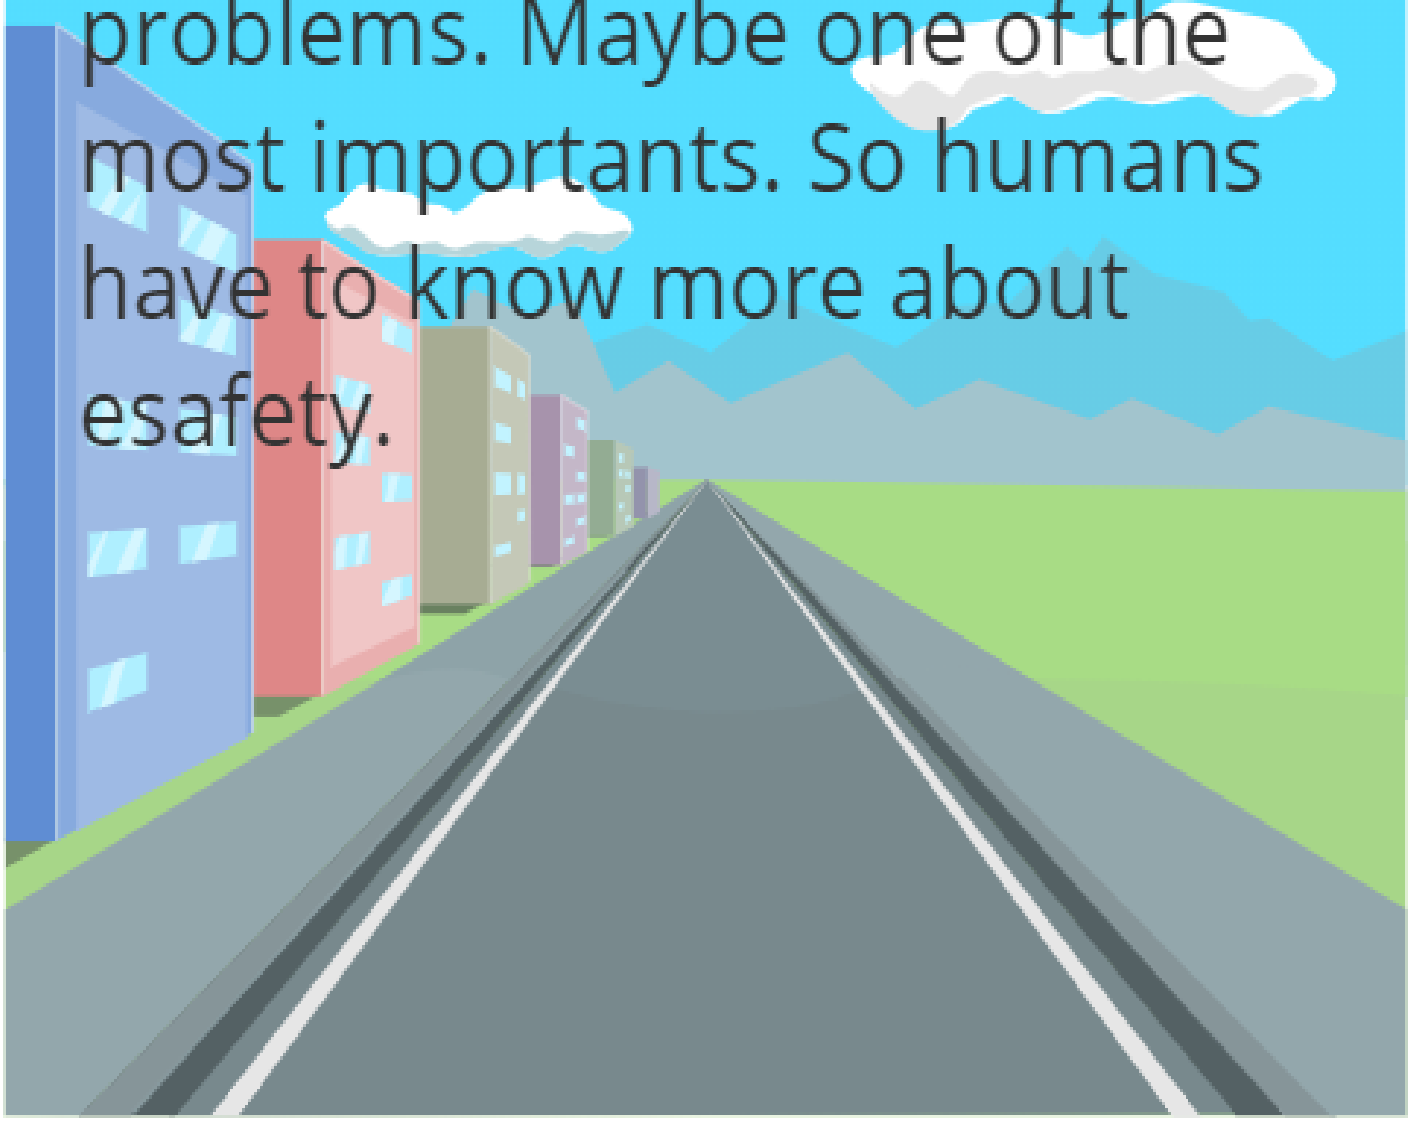
Old times humans think only to eat and save yourselves from wild animals but now humans have faced a lot of problems.

And e-safety is one of this problems. Maybe one of the most importants. So humans have to know more about esafety.



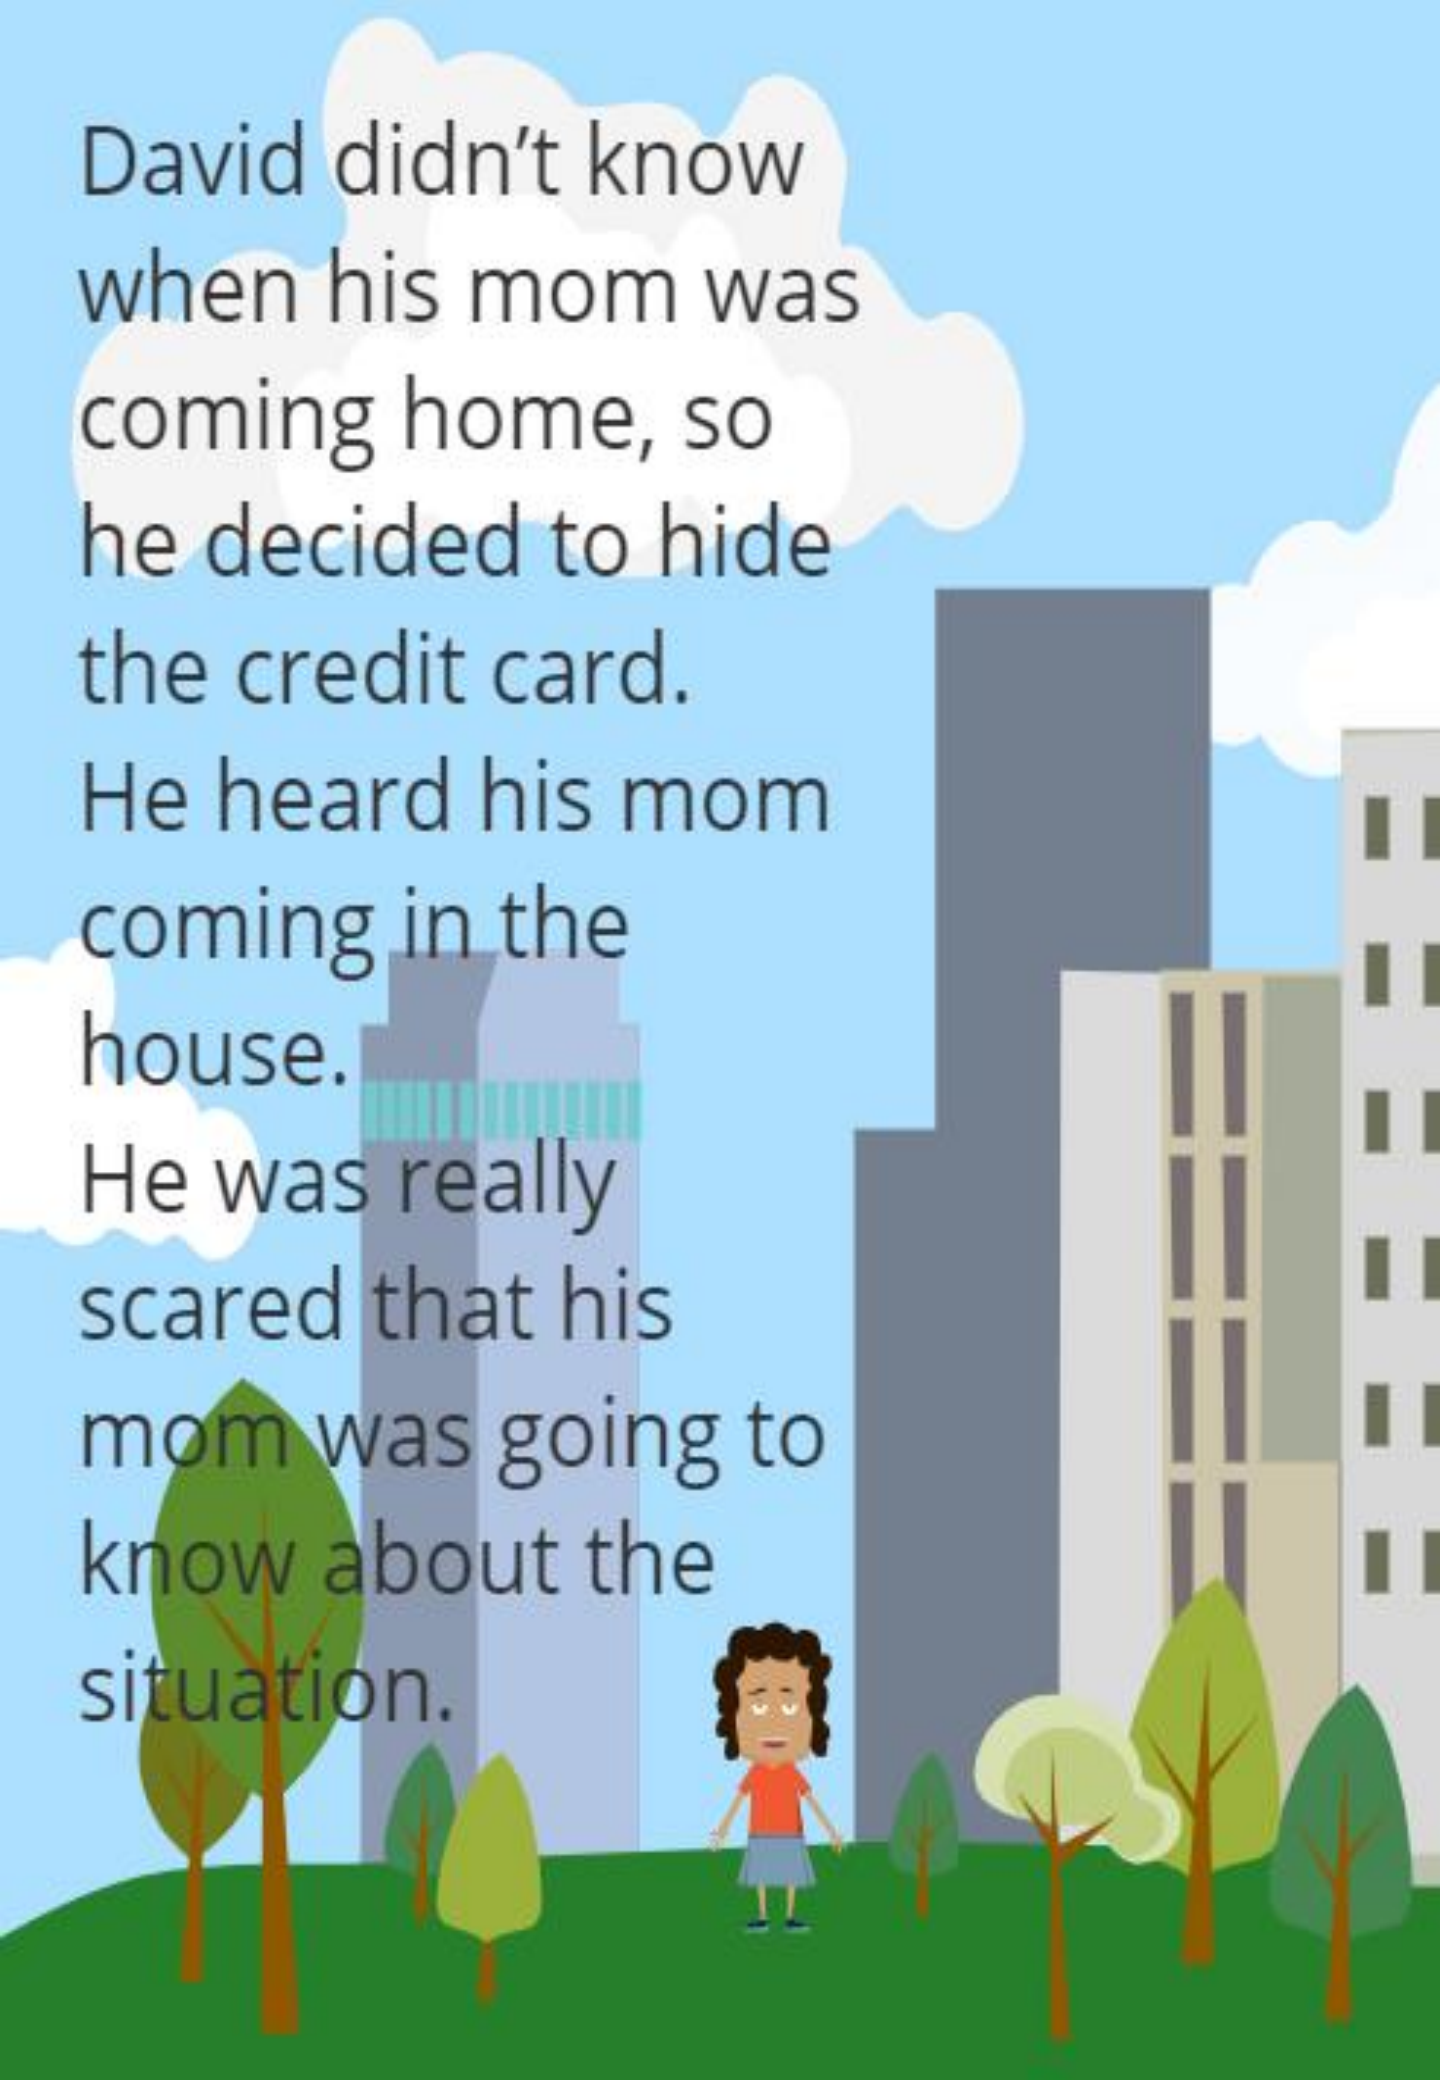
This is David.
He also has to know more e-safety but he doesn't know anything about it. Also he likes computer games more.

One day when David played a game he showed a warning if he wants to go on playing he should pay some money. But he should pay money with a credit card and he has no credit card.

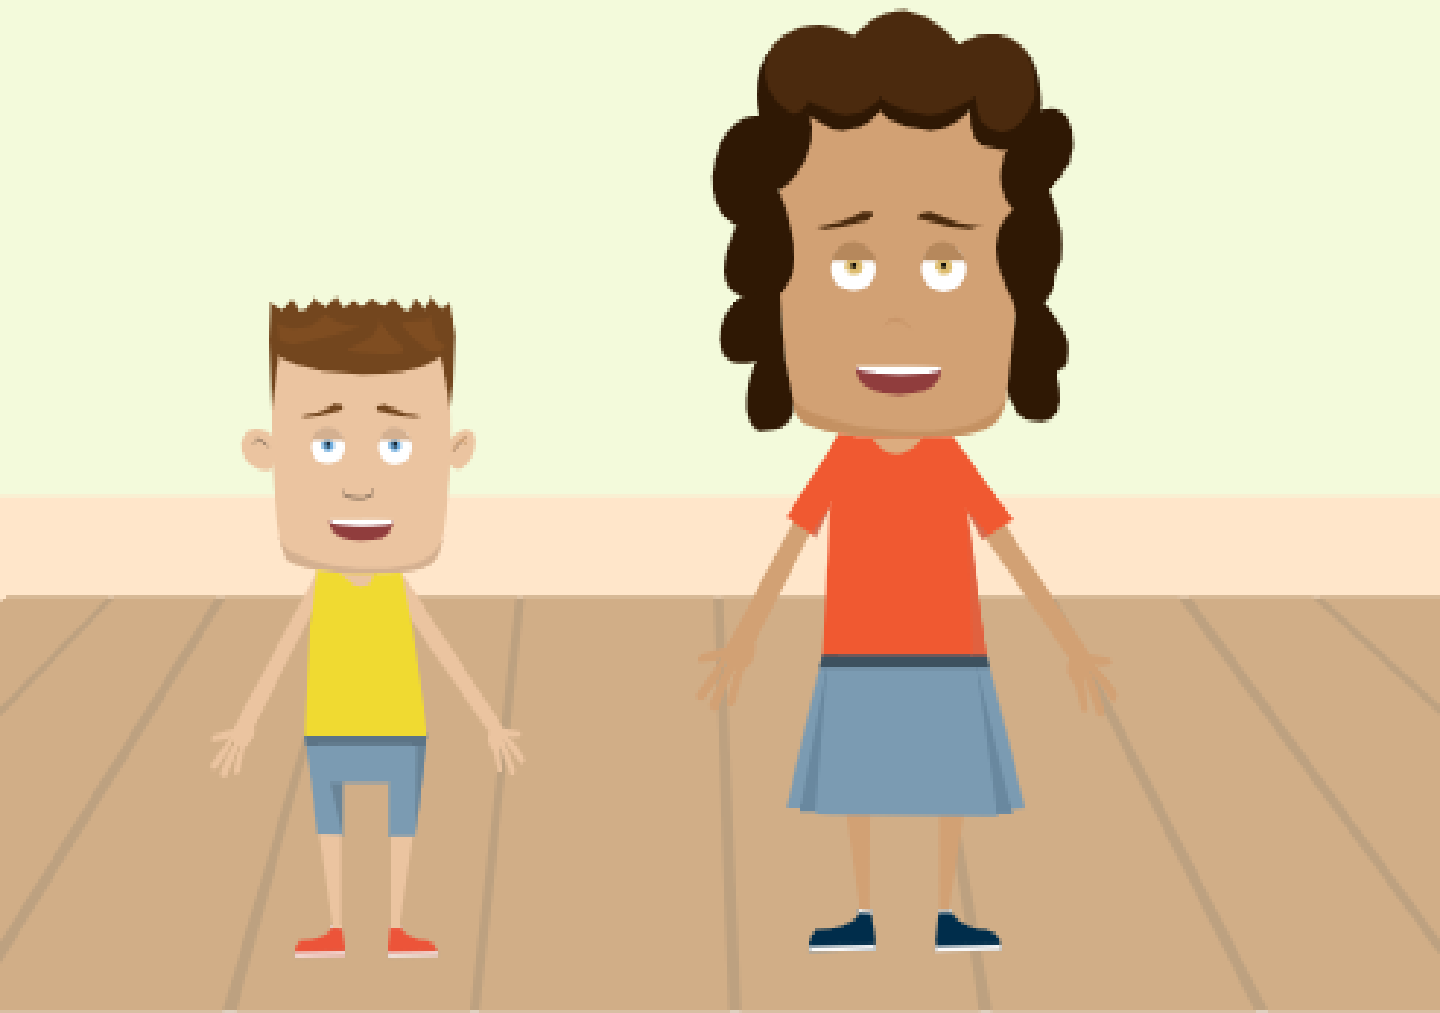
David didn’t know what to do.
He has been thinking for a long time about his problem.
After long thinking he came to the conclusion that he would take his mother's credit card. But how will he do it? His mom will certainly not allow it.
But somehow he will already find a way.

In the first ten minutes nothing happened.
But later the computer blocked and the virus appeared.

David didn't know when his mom was coming home, so he decided to hide the credit card.
He heard his mom coming in the house.
He was really scared that his mom was going to know about the situation.

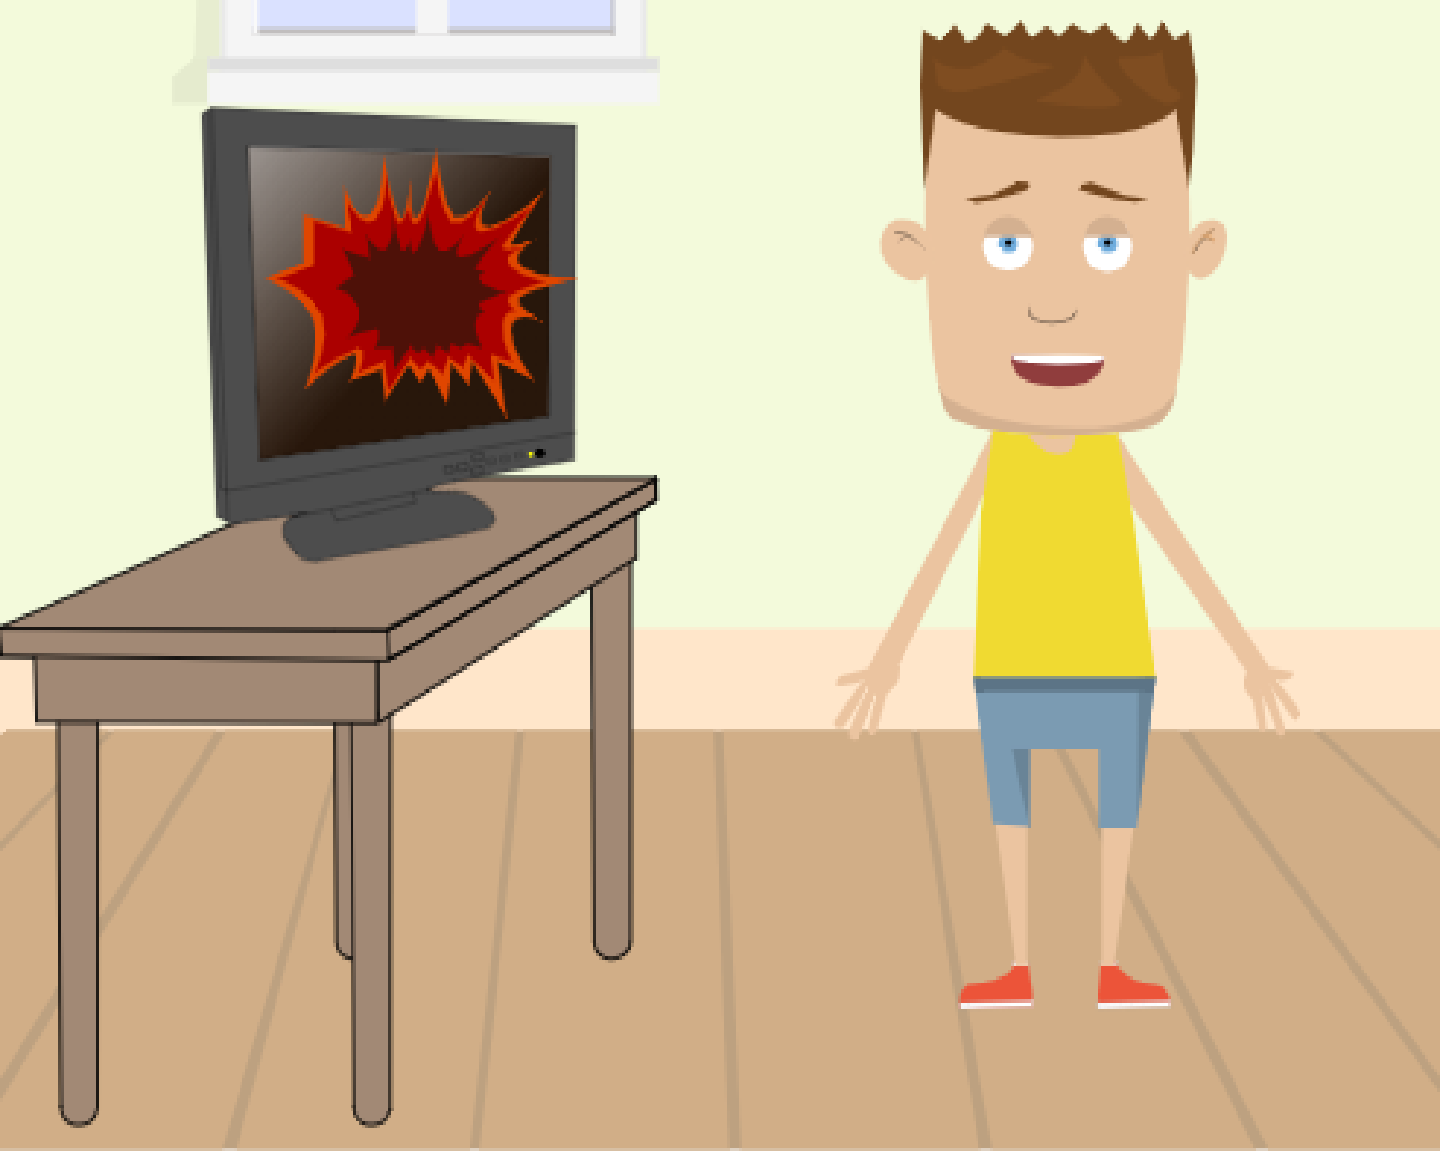


After David's mom came back home he was really frightened about the situation. He knew that he messed up and wanted to fix that, so he decided to tell mom all about the situation and return the credit card.



David's mom was very angry and disappointed by his decision.

David learned that it's not good to give personal data to suspicious programs, because you can get a virus.



Hacker's can steal you private information, they can steal your identity and money.

What can we do to avoid it?

Keep personal information professional and Limited
Keep your privacy settings on practice safe browsing
Make sure your internet connection is secure
Be careful what you download
Choose strong passwords
Make online purchases from secure sites
Be careful what you post
Be careful who you meet online
Keep your antivirus program up to date
