

# POSITIVE ASPECTS OF THE PANDEMIC

During this last year we have lived a very difficult situation, a lot of people got sick, there have been many deaths around the world and the quarantine has negatively affected to many people.

But, can we think of the positive effects of confinement?

Now, I'm gonna tell you about the  
positeves thing it had for me.

I had a lot of free time to be able to do do activities at home that I usually cannot do:

- Watch films and TV series.
- Play sports
- Play board games
- Read

I spent all the time at home with my family so we shared many good times together, we even became closer.

I realized there are many solidary people around the world.

Doctors, nurses and scientists did a laudable work and we support each other with our issues.

THANK

YOU!
