Environmental legislation in Romania

Mission and vision

Activity

# Environmental legislation in Romania

- The environmental legislation is represented by all normative acts such as laws, decisions and ordinances of the Government, orders issued by different EU authorities and regulations that define and regulate all the measures applied in the proper management of waste generated by individuals and companies, measures necessary for the protection of the environment and population health, through selective collection and efficient and environmentally friendly treatment of waste of all kinds.

# Environmental legislation in Romania

- Legal obligations apply to both individuals and companies, including liability for the selective collection of waste, its transportation, storage and treatment / recovery, by the methods provided by the law according to the type of waste. Managed waste can be classified according to its origin in 3 large categories:
- **municipal and assimilable waste,**
- **sanitary waste**
- **production waste.**

# Environmental legislation in Romania

- The hierarchy of waste is established according to the order of priorities in the environmental legislation as follows:
- prevention;
- preparation for re-use;
- recycling;
- other recovery operations, (energy recovery);
- the elimination.

# Environmental legislation in Romania

- This hierarchy streamlines waste generation and waste management actions, thus reducing the harmful effects on the environment and the health of the population.
- Only authorized economic operators can carry out waste management activities.

# School curriculum

Ecological education in school is a constant concern in all categories of activities. This approach is of major importance since the first forms of organizing children's knowledge of the environment occur in pre-school and continuing education in primary classes through the reintroduction of first-class Environmental Knowledge.

Further, in secondary school there is Ecological Education in the school curriculum, which continues to high school with special environmental protection modules.

## Motto

When almost everyone says  
"It's not possible!", there are  
still some people who say  
„Let's find a solution!"

# GREEN FUTURE COMPANY

## Mission

Protecting the environment by creating green spaces and selectively recycling waste

# GREEN FUTURE COMPANY

## Vision

Through this project we aim to achieve a closer connection with the environment in which we live by carrying out various protective activities, to inform our colleagues about the effects of these wastes from human activities on the environment and we hope to see these in the future results in a cleaner environment

# Activities

- Beautify areas in and around school by collecting metal containers from paper, cardboard, plastic, etc.
- Send waste collected at the school level to different recycling points.
- Setting up a green space at the school level by planting different plant species such as magnolia, tulips, pyracantha, tamarix, tagete, jasmine and carnations.

## Activities

Through these project activities, we try to inspire other students to love nature, to show them some simple ways of protecting and to create new behaviors among students that reflect the concern for maintaining the quality of the environment.
