

My project: Medical Candy

1. Short description of project (What? Where and when? Why? Who? ...)

We had to make some medicine from medicinal herb, for a school subject. We had to make it in the subject "NWT". This means "natural science and technology". We had four lessons and we were four people for the project. We made the project in our school, but we had to get the things we need by ourselves.

2. Main goal(s) and objectives (What do you want to achieve?)

We wanted to create a medicine against sore throat and cold. It was supposed to be a medical candy.

3. Project team (Who is part of the team?)

We were four people three classmates and me.

3. Project plan (Who does what and when?)

See project plan worksheet

4. Resources (What do you need?)

We needed some information out of the internet to know how to make some medical candy. Except this we needed some medicinal herb like honey, sage and fennel. Next to this we needed orange juice, lemon juice, sugar, water, a cooker and a spoon.

5. Constraints (Which obstacles might get in your way?)

Maybe the medical candy could be too watery or too soft in the end.

6. Evaluation (Did you achieve your main goal? What went well? What went wrong? Which difficulties did you encounter? How did you solve them? ...)

We achieved our main goals and we made some medical candy.

Project plan

Which steps do you have to take?	Until when?	Who is responsible?	√
Get our things	First lesson	Everyone had to bring something.	
Sage, fennel and honey boiling down.	Second lesson	Me	
Doing photos.	Last but one lesson	One of My classmates.	
Doing a presentation about our project	Last lesson	An other classmate	
Test the medical candy.	Last lesson	The last classmate.
