
<p>Here we go! The creation of a mechanically controlled car</p>		
<p>Test your car</p>		

<h2>TEAM A1</h2>	
<p>Pupils Belgium</p>	<p>Pupils Sweden</p>
<p>- Astrid Noppe - Marthe Dermaut</p>	<p>- Mebel - Rebecca - Elsa-</p>

1. ORIENTATION

1.1. Research questions:

- What will be the average speed of the mechanically controlled car?
- Which changing of parameters has the best result (fastest speed)?

1.2. Hypothesis

(here you only have to make a hypothesis about question 2)

Sweden: (no changes made)

Belgium: We think that the car with the highest weight will be ride farther.

2. PREPARATION

On the other document (twinspace) you see the sketches and propulsion of the car.

2.1. Parameter that will be changed:

(here you describe what you will change to the car)

Sweden: (no changes made)

Belgium: We change the weight of the car with nails.

2.2. Method:

2.2.1. Let your car drive and measure the distance that is possible.

2.2.2. Now, for the experiment, choose a distance that is shorter than the maximum distance. Make a sign on the floor on that distance.

2.2.3. Let the car drive and measure the time.

2.2.4. Calculate the average speed.

2.2.5. Repeat this three times.

2.2.6. Now, change a parameter and repeat the whole experiment.

3. DATA ANALYSIS and DISCUSSION

3.1. Observations and Measurements:

	DISTANCE (m)	TIME (s)	AVERAGE SPEED (m/s)
1	0.80	0.66	1.22
2	0.80	0.72	1.11
3	0.80	0.69	1.16

Changing of a parameter: *(describe what you change)*

	DISTANCE (m)	TIME (s)	AVERAGE SPEED (m/s)
1	0.80	0.96	0.83
2	0.80	1.15	0.70
3	0.80	0.94	0.85

	DISTANCE (m)	TIME (s)	AVERAGE SPEED (m/s)
1	0.22	1	0.22
2	0.24	3	0.08
3	0.73	2	0.365

4. REFLECTION

4.1. Conclusion: *(here you discuss when the car drives fastest with or without changing)*

Belgium: the car with the most nails drives faster than the car without.

4.2. Comparison of the results of the different countries:

The car of the Belgians drives faster.
