De studenten van Berkenboom Humaniora starten hun Europees avontuur met een Erasmus-programma

Berkenboom Humaniora neemt deel aan het Erasmus-programma met het project 'Totally Maths'

Het door de EU gefinancierde Erasmus-project biedt 24 studenten van Berkenboom Humaniora de kans om hun wiskundige, taalkundige en professionele vaardigheden te ontwikkelen en te verbeteren door middel van schooluitwisselingen uit Spanje, Italië en Ierland. Het project kadert in de projecten voor innovatie en de uitwisseling van goede praktijken (kernactie 2-KA2) van Erasmus-strategische partnerschappen.

De projectactiviteiten, die gedurende 2 schooljaren georganiseerd zullen worden, zullen de leerlingen en de leerkrachten in staat stellen om ervaringen met andere Europese collega's te delen. Leerkrachten zullen overleggen over vakgerichte aanpakken zoals didactiek, het gebruik van de modernste hulpmiddelen en het motiveren van leerlingen. Leerlingen zullen hun wiskundige vaardigheden aanscherpen door het onderwijzen van wiskunde aan leeftijdsgenoten. Daarnaast zullen ze ook de kans krijgen om zich verder te bekwamen in digitale vaardigheden, vreemde talen, sociale vaardigheden en hun kennis over het Europees cultureel erfgoed aan te scherpen. Dit gebeurt door samen te werken in een internationale groep van leerlingen.

Gedurende deze twee schooljaren zijn er vier uitwisselingen waarin studenten en leraren van de vier deelnemende scholen elkaar zullen ontmoeten. Sint-Niklaas is eerst aan de beurt. Op het programma staan wiskundewandelingen in ver-

schillende steden, lesgeven aan studenten van Berkenboom Humaniora, een werkopdracht in Technopolis, 3D printen van hulpmiddelen voor de wiskundeles en tal van andere culturele activiteiten. Later dit schooljaar is er een tweede uitwisseling in het Italiaanse Verona, waar goniometrie en online wiskundemateriaal centraal staan. Volgend schooljaar worden Marbella in Spanje en Kells in Ierland bezocht.

Aan de basis van dit project ligt een jarenlange samenwerking tussen de scholen. De scholen kwamen met elkaar in contact door het online leerplatform van eTwinning. Hun projecten sleepten reeds meermaals een Vlaamse eTwinning prijs in de wacht. Ook dit jaar is het project smArt één van de prijswinnaars. In dit project werd rond het woord 'Hoop' een vertoning gebracht, een samenwerking van dans, tekst, muziek en creativiteit. Ook de kunst in de verschillende steden werd met een wiskundige knipoog bekeken. Een delegatie van de school ontving de prijs op het Departement Onderwijs op 11 oktober 2019. Dit project smArt genoot eveneens de steun van de Stad Sint-Niklaas.

International Moose Count Underway

By BOB O'BOBSTON

The UN-sponsored International Moose Census got off to a flying

start today with hopes for an increase in the worldwide moose population compared to last year's disappointing figures. Among the traditional early reporters were Egypt, returning figures of six moose, a twenty percent increase on 2011's figures of five, and Uruguay whose moose population remains stable at eleven.

According to Robbie McRobson, head of the UN Moose Preservation Council, worldwide moose numbers are expected to grow markedly on last year due to the traditional moose strongholds of Canada and the United States, with the larger developing moose ecologies also poised to make gains. The largest percentage increase in moose will likely come from China", says McRobson, "The Chinese government has invested heavily in moose infrastructure over the past decade, and their commitment to macrofauna is beginning to pay dividends". Since 2004 China has expanded moose pasture from 1.5% of arable land to nearly 3.648% and moose numbers are expected to rise to 60,000 making China a net moose exporter for the first time. This is good news for neighbouring Mongolia, a barren moose-wasteland whose inhabitants nonetheless have an insatiable desire for the creatures. The increase in Beijing-Ulanbataar trade is anticipated to relieve pressure on the relatively strained Russian suppliers, but increase Mongolia's imbalance of trade with its larger neighbour.

Historically the only competitor to China in the far eastern moose markets has been Singapore but the tiny island nation is set to report a net loss, expecting a decrease of more than five percent on last year's 50,000 moose counted. The head of Singapore's Agency for Agriculture, Jing-Feng Lau, explained to an incredulous Singaporean parliament yesterday that bad weather had contributed to this season's poor showing, most notably when a cargo of 150 moose were swept out into the Indian ocean in a monsoon.

Yet again the global demand for moose will be met largely by the US and Canada. The recession-hit States is taking comfort in its moose growth figures with gross production expected to break 700,000 and net exports to grow by 2%. The worldwide dominance of Canada shows no signs of abating though with this year's moose population expected to match last year's record figures of one hundred million billion.

Europe's rise as an international moose power will slow slightly this year as a response to the European Union's move towards standardising the European moose. Stringent quality controls are holding back the development of the eastern european populations compared to last year when they contributed significantly to europe's strong growth figures. Norway, which is not an EU member but has observer status, strengthened in numbers relative to the Euro area with numbers of Norwegian moose, known locally as elk" expected to rise for the tenth consecutive year, particularly thanks to a strong showing in the last quarter.

As moose season reaches its close, researchers world wide are turning to science in an attempt to boost next year's figures. NASA stunned the scientific community today with the announcement of their discovery that the moon is significantly smaller than previously believed. This conclusion, which is the conclusion of a ten-year collaborative project, will have profound implications for the moose community as the gravitational field is now known to be of the right strength to support moose in orbit.

According to John Johnson, head of the NASA Moon Sizing Experiment the first delivery of moose into low moon orbit could be achieved as early as the third quarter of next year. The technology to nurture moose in space is available now", he said, "all that is needed is political will".

Granny wins World Wrestling Championship

By ROY MCROYSTON

Records were smashed in Nicaragua's World Wrestling Championship last night as 78-year-old Maud Johnson, grandmother of five, became the first woman for fifty-six years, and the oldest competitor ever, to claim the gold medal. She walked away with her million dollar share of the prize money, runner up Tommy Thompson from Nigeria taking half a million, and third place New Zealander John Smith receiving a warm handshake from the umpire.

Having started the tournament a rank outsider she began to impress in her second match when she took US number three Ron Ronson by surprise and subdued him in twenty seconds with her unique move that has been dubbed "Maud's Death Grip". The injection of a new wrestling style into the tournament was welcomed by spectators and Johnson's pre- and post-match breakdances have proved entertaining to fans. However, she was still not expected to win in round three last Wednesday, facing off against title-holder Paulo "Spine-Snapper" Lutti, of Vatican City. Underdog Johnson was soon showing her worth with stamina and agility easily matching last year's winner. Lutti's experience paid off initially as he took the first two rounds, but as Johnson became more confident her superior strength came to the fore and she clawed back two rounds to take the contest into a decider. By this time Lutti's body language indicated that he already felt overawed by the pretender to his crown, and the newcomer took advantage of this to engage a mutual headlock which she held for three hours until the Vat-

ican man retired from exhaustion. The next seven matches were barely a contest as the news of Johnson's supremacy overawed all her opponents who became too intimidated to fight properly.

Nigerian Tommy Thompson is also a relative newcomer to the wrestling scene, but with his 210lb frame he was expected to fare well against Johnson who weighs in at only 90lb. However Johnson's lithe and slender, some would say scrawny, figure belies her agility and strength which she demonstrated by holding Thompson above her head several times during the bout and throwing him into the crowd once. With the scores tied at 2-2 time ran out and the contest went to a panel of judges to be assessed. They awarded Thompson a C grade whilst Johnson received an A, becoming the first grandmother to ever win the title.

The new champion explained her success as the result of a strict training regimen instituted by her coach and grandson five-year-old Sammy Johnson. "I've been drinking ten raw eggs for breakfast every morning, sprinting fifty miles a day and carrying my daughter's car to the end of the road and back whenever I felt my arthritis was OK" she said. Sammy added "I always knew she could do it. She's my grandma.". The youngster is also her manager and has reportedly arranged sponsorship deals which will dwarf her one million dollar prize fund. Her new contract with headband designer Nike alone is set to earn her fourteen billion dollars over the next year. She will also be promoting Tupperware, Halliburton, the Republic of Macedonia, and Gala Bingo. Her continued participation in the sport is not assured as she wants to spend more time on her bungee-jumping business, and knitting. Everyone here at the World Championships, however, hopes for her return.
