

Hello dear students of 2030. My name is Milla. Currently in 2021, I am in 2nd at the Highschool in Guer Broceliande. I hope you are well and that you are not going through a difficult period like us. Indeed, we have been in the middle of a pandemic for over a year now. A virus ravaged the Earth in 2020, the Coronavirus. We have to wear masks, respect several strict rules in order to preserve everyone's health. Many people die every day... There has been a lockdown for several months while homeschooling. Anyway. Here, pollution is increasing day by day, I hope that in 2030 the governments and the populations will have made efforts to preserve our planet and that natural disasters will be less frequent. Maybe there will be discoveries on the planet Mars? Also, I think that many new technologies will have been invented in 2030. In 2021, we are already at the Iphone 12, I can't imagine at what version you have arrived in 2030.

Goodbye!
