

Dear Children of Future

We are in the year 2021. I'm ten years old now. I feel lucky. Because we can go to picnic, we can swim in the sea, we can love animals, we can drink clean water and we can breath.

But people polute the air, sea and soil. People cut the trees and use water carelessly.

We don't keep the environment clean. We only think of ourselves.

If it continues like this, there will be no sea to swim, no water to drink, no animal to love, no air to breath.

I think we can't leave you a good future, but you can grow trees, you can save animals and you can keep nature clean.

DON'T FORGET WRITE A LETTER TO FUTURE!

GREAT GRAND MOTHER

ZEYNEP

Dear Future,

My name is Ahmet Talha. I will tell you about today's problems and the mistakes we make. First of all, I apologize to you. We are making huge mistakes. Perhaps this letter will never reach you. Because the ozone layer, the waste, the exhaust gases, the factory fumes. Perhaps by your time the ozone layer will completely melt away and the world will disappear. As we waste water resources, it is running out. By your time water resources can be completely depleted. I know we should be careful. But we are still making these mistakes. I'm sorry.

Love

Past

Ahmet Talha Ekici

Dear Future

I'm Zeynep Su Aydođdu. I'am eleven years old. I'm going to 5th grade. I study at Mehmet Varlıođlu Secondary school.

I'm writing this letter to the future generations. I don't want you to repeat our mistakes.

In my opinion, the most important problem of Earth is environmental pollution. I want to talk about this subject. Because of pollution, Earth is dying. It's important for everyone to keep our planet clean. Don't forget that nature is our source of life, without it we can't breathe. Nature's disparition means death of animals and plants. That's why we must clean our nature. We can start by not cutting down trees. We must not go hunting unnecessarily. We must use recyclable bins to get rid of garbage. We should use hepa filters in factory's chimneys. We should not leave our industrial wastes in nature.

Yes, we made mistakes about these issues. I hope this letter will make you more aware of our environment and pollution for the future. I want you to do your best to keep our planet safe, as we are trying to do so now. It's for our planet but also for future generations. I'm sure you will be better than us.

Please, be aware of our planet's value.

Thank you.

Dear Future,

We make a lot of mistakes for the nature, and I think they will make the world a bad place. If we correct these mistakes, we can make the world a better place. Let me talk about some of our mistakes and we will continue to do so. Polluting and harming nature is one of the biggest mistakes, because this destroys the place that allows us to survive. We said that we should not pollute and harm the nature. But we pollute and harm the nature. We should do this in our normal life there are many products we throw away, we can recycle these products. I hope you will change these, protect the nature and recycle the products.

Love,

Past.

Merve Durmuş

Dear Future,

Everyone can make mistakes. But we should admit our mistakes.

Today, we don't read much. Please, you, read a lot. It is very important. Educate yourself.

People don't respect or love each other. I hope people will love and respect more.

I want peace, health and happiness for you.

Love,

Past

Harun Keskin

Dear Future

The forests are on fire. If we don't want these to happen in future, let's not burn the forests. We also should not pollute our forests. We should leave healthy, clean and beautiful forests for future. We want to live in green.

Love,
Past
Zeynep Dila Koparan

Dear Future,

I Think you have solved many problems in the world we fight against today. You cleaned the water and solved water. You built robots for agriculture and solved soil pollution. You solved the air pollution with clean fuels.

I hope this day will come and you live clean and green.

Love,

Past

Toprak Ceylan

Dear Future,

We are in 2021 now. Grown-ups say that past was so beautiful. They were happier. Would we miss our time in the future? We hope future will be better that you don't miss the pass. There is an epidemic all over the world. People are wearing masks. We should live at houses to protect ourselves. They have started to vaccinate people. We will get rid of the virus I hope. We must learn from this to avoid such problems in the future.

Today, there are water shortage and drought problems in the world. We should plant trees. We should use water more carefully. If we don't find solutions, you will fight against these problems.

Love,

Past

Egemen and Utku Urtekin

Dear Future,

I hope Covid-19 will be extinct. I want to live in a clean world.

People should give more importance to education.

Some people harm animals, we should punish them.

We also waste food. We should stop this.

And we should give more importance to job opportunities.

Love,

Past

Livanur Ilhan

Dear Future,

We don't plant trees, pour water in vain, spent too much time on phones and tablets. Please don't make these mistakes!

Protect the forest, love green!

Now we could not go out because of the corona. We made this

If you have a chance, you should use.

Love,

Past,

Berat Yilmaz
