DEAR FUTURE GENERATIONS

Dear Future Generations,

I am Hatice,

I want to talk about science and technology. We are living in a digital world. Today our world is going through great transformations. Machine learning are becoming more important. During COVID19 pandemic we have distance education and our social life has greatly changed. The people are pleased to get the advantages of digital world and have more comfortable and easy life.

However our environment is getting worse day by day. Water, air pollution, garbage in oceans, global warming are the most important problems. Scientists have predicted that the rising temperature of earth, could cause a series of bad events that will effect your future.

We should make change and solve these problems by protecting it and caring for it.

Best Wishes

Hatice B.
