

MESSAGE FOR THE FUTURE.

In the latter, a series of problems have arisen that have made the world change completely.

One of the main problems is environmental pollution and global warming, due to the garbage that humans throw into the streets, rivers, beaches ... and for other causes such as increased gases. greenhouse effect or deforestation. This problem not only affects the earth but also us, living beings.

COVID-19 is also being a huge problem for the world, especially in the countries that are most affected. The pandemic is affecting the economy of the countries so we will enter a great crisis, just as a large part of the population is dying and another large part is getting sick.

Hopefully one day these problems and all those that exist today will end and we will fight to have a much better world.
