Ideas for a better 2030

How can we use new technologies to make live in 2030 better?

Show us:
- your plans for a **Start-Up** that you might start in 2030. (Facebook and Instagram started small, they connect people, Tesla started small and they sell clean cars.)
- your plans for a new or better **NGO**. (Greenpeace and Amnesty are NGOs.   Can they work better with new technology? Do we need a new NGO to solve new problems?)
- your plans for a **foundation** (Wikipedia is a foundation. Wiki brings knowledge to the people and is not interested in making profit)

We want to see your ideas at the Munich Meeting in autumn 2019.
Make posters, or PowerPoints, or a video, as you like.
1. Step: Think of the challenges we have to face (in 2030 we will have 8,5 billion people, most of them are living in cities, the climate is changing and we have to save energy. They all want to live a happy live.)
2. Step: Find solutions
3. Step: Share your Ideas in Munich
4. Step: Make at least parts of your ideas real and make 2030 better.

Questions left?

Here's an example: For me school 2030 is exciting. So I made a video. https://youtu.be/c_SIxk6Ts1Q
And a picture story https://drive.google.com/file/d/1VxkHsAGVIdy_47lclLSda3fQdr0lueYz/view?usp=sharing
You can also paint a poster. Or do something completely different.
