## GOAL 13 IN ACTION

We can combat climate change together!

IT'S TIME TO ACT! – ANÔNIMO

## João Ramalho, Portugal

I've made a poem in the English class and this is what i think about the environment.

Broken bottles and charred pieces of glass  
 Why is there so many trash on the grass?  
 Why so many plastic and toxins in the sea?  
 This is so bad to our planet can't you see?  
 Stop the pollution It's such a bad thing!  
 Don't throw trash to the floor! Let's do the right thing!

João Ramalho

## Poster created by us to disseminate in the media on the World Environment Day.

**Poster created by us to disseminate in the media on the World Environment Day**

**Djesika, Bulgaria**

As we all know our planet is in a deadly situation. There are people who spread the awareness of all problems we face now and will face in the future. But there are also people who just don't care and do things that will later affect all of us. That's why we, friends, classmates, relatives, should start uniting and doing some

important things. We all know what we should and shouldn't do, after all it has been said many times. The importance of our talk is to actually encourage people to do these things. We all should find a way to get more people to know how to help and why they should help. We can do it so we should. After all it is our planet's future that is on the line.

## Gonçalo Pereira, Portugal

To save the planet we must do good practices such as: saving water, saving energy, recycling, reusing and reducing, not throwing garbage on the floor and we must plant trees. With these good practices we can have a clean planet.

## Gabriela, Portugal

"We don't have planet B": we help save our planet by stopping using plastic and by recycling as much as possible.

## Vanya, Ukraine

**Stop using plastic and cellophane!**

Earth in plastic bag by Marco Verch

"Our planet is facing major conservation challenges from threats like climate change, deforestation, overfishing, and illegal wildlife trade. But protecting our planet and keeping planetary warming below 1.5C (2.7° F) is not impossible and none of us need to do it alone. Our impact on the planet primarily comes from what we eat, what we buy, how we power our homes, and how we travel from place to place. Of course, governmental policies and protections also play an important role.

**Together, we can take action to create lasting solutions and protect the future of nature."**

#### **What is biodiversity and why is it under threat?**

Even the most important biodiversity hubs around the world are not immune from human pressures. Borneo, a massive island in southeast Asia, is home to more than 1,400 different animal species, and at least 15,000 plant species. Iconic wildlife like orangutans, pygmy elephants, clouded leopards, rhinos, and proboscis monkeys share the landscape with the world's tallest tropical trees.

## **Egor, Ukraine**

**This is definitely a great advices on this topic!**

*"We are the first generation to know we're destroying the world, and we could be the last that can do anything about it. Speaking up is one of the most powerful things you can do especially if it's to the right people. Talk to your MP. Tell them to commit to action to protect our natural world.*

*Contact the brands you buy from and get them to tell you how their products are sourced. Use social media – this is one of the most effective ways to get brands to listen to you, so tell them that you want a change.*

*It's not just about speaking to the people in charge. Talk to your friends, neighbours and colleagues and get them to make positive changes too. Speak up, speak to everyone, and make your voice heard."*

## Vlad

Nowadays not everyone thinks about our state of nature, so more and more people burn and cut trees, so the air pollution becomes more and more serious problem.

Read about air pollution and act!

### Air pollution

Air pollution kills an estimated seven million people worldwide every year. WHO data shows that 9 out of 10 people breathe air containing high levels of pollutants. WHO is working with countries to monitor air pollution and improve air quality.

WHO

## Nika, Ukraine

The Earth is the place where we live, it is our home and the task is to protect it and appreciate all it give to us. If the humanity change nothing in a thousand years our planet will not exist, We should start doing something and give a chance to next generations to live in a peaceful and beautiful home.

The Earth is the place where we live, it is our home and the task is to protect it and appreciate all it gives to us. If the humanity change nothing in a thousand of years our planet will not exist. We should start doing something and give a chance to next generations to live in a peaceful and beautiful home.

### Voice for the Planet

People around the world are adding their voice to call for urgent action to protect and restore nature. Add your voice today.

VOICE FOR THE PLANET

## Vicky, Ukraine

What can we do to save our planet?

We can recycle and take care of the environment. We should focus on green products, recycling programs, solar research.

(free image)

## Stefani, Bulgaria

Our planet is in danger and we have to do something about that, because we don't have planet B, we only have the Earth and we have to do something to save her. We can start by recycling waste. But at this times is going to be good if we just stop throwing the garbage on the ground and start using the trash can. It is a good idea to join some kind of "Clean the Earth" group and start cleaning the Earth from the trash.

It's our planet and we must do something, because if we don't do something nobody else can help us. Yes we did that to our Earth but we can also save her. We have the power to do that and we need to save her, because this is our home and we can't let it down.

## Anastasia, Ukraine

"Nowadays, the place we live is in great danger. There are a lot of things, which affect the Earth. Factories waste and exhaust gases, deforestation, poisoning of the air and water pollution, destruction of the ozone layer and global warming – these are the problems which a modern human should face. The main question is what is needed to be done to make the things better? Is it possible to change the current situation somehow?

I think, there are some steps that could help people to improve the things. The first that we are able to do is to change the way of life. In my opinion, we should begin with something very simple. For example, start using public transport instead of our cars, we can use glass and wood instead of plastic, it will be effective if the people organize planting of the trees and renovation of the parks.

As you can understand, many serious problems exist and these solutions can be ineffective. The main task is to save the planet which is going to be destroyed. We understand, that there is no opportunity to renew the nature completely, but it is possible to make some improvements. If people realize the size of the problem and all the possible consequences, there will be an encouragement for them to take some measures.

Talking about the saving of the environment, it is important to remember three basic rules: reduce, reuse and recycle. It is very simple, but somehow we tend to forget about it. If we reduce the usage of natural resources, we will have an opportunity to consume energy and water more wisely. Reusing will help to prevent total exhaustion of natural goods, such as trees and water. Recycling will help to prevent high levels of pollution. To my mind, we should also look for the alternative energy sources. These could be wind, water and solar energy. In the whole world, scientists are making efforts and looking for ways to use all the resources properly, so I hope that in future they will have a chance to succeed. That means that we will give up using coal and oil, which can give off very toxic wastes.

The source of human life on the Earth is water and it needs our attention and protection. Many factories throw the wastes into the rivers and oceans as a result we receive the extinction of rare animal species and complication of the process of water purification. We should take measures before it is too late.

We should also remember about the air. The easiest ways to fight with the air pollution are planting the trees and destroying the reason of the pollution. It is easy to plant a tree and it does not need hard efforts. All that we need is to have the desire to improve the situation and to stop being lazy.

The Earth is the place where we live, it is our home and the task is to protect it and appreciate all it gives to us. If the humanity change nothing in a thousand of years our

planet will not exist. We should start doing something and give a chance to next generations to live in a peaceful and beautiful home."

## Olia, Ukraine

This text conveys my feelings on this topic and that is why I wish to share it with you.

"The Earth is dying in the hands of humans who brutally take advantage of it. People kill animals, deforest, dry out bodies of water and pollute the air. It is time to stop and think about your actions!"

[https://www.en365.ru/save\\_our\\_planet.htm](https://www.en365.ru/save_our_planet.htm)

## Daniel

Simple steps to save our Planet:

- drive less;
- eat sustainably;
- plant a tree;
- recycle more;
- use less hot water!

## Vanya

Stop using plastic!  
Produce less trash!  
Throw away less food!  
Save the Earth!
